Introduction

Welcome to *Bridge to Success Grade 10*

Bridge to Success is a twelve-grade course for learners of English as a Second Language (ESL). The twelve grades range from the beginning of Cycle 1 to the end of Cycle 3. The course has been designed to fulfil the requirements of the English as an International Language (EIL) National Learning Standards Unified Framework.

Bridge to Success Grade 10 consists of twelve thematic units of study, which include a range of activities, text types and objectives, split over three terms.

The materials reflect the following principles:

- **An Emirati focus, with an international perspective.** Specifically developed for young learners throughout the United Arab Emirates, the themes, situations and literature covered by *Bridge to Success* strive to reflect the Emirati context and encourage learners' curiosity about the wider world. This fosters respect and interest in other cultures and leads to awareness of global citizenship.
- **An enquiry-based, language-rich approach to learning.** *Bridge to Success* engages children as active, creative learners. As learners participate in a wide variety of curriculum-based activities, they simultaneously acquire content knowledge, develop critical thinking skills and practise English language and literacy. The materials incorporate a 'learning to learn' approach, helping children acquire skills and strategies that will help them approach new learning situations with confidence.
- **English for educational success.** To meet the challenges of the future, children need to develop facility with both conversational and academic English. From the earliest stage, *Bridge to Success* addresses both these competencies. *Bridge to Success* presents authentic listening and reading texts, writing tasks, and end-of-unit projects similar to those learners might encounter in English-medium and international schools. Emphasis is placed on developing the listening, speaking, reading and writing skills learners will need to be successful in using authentic English-language classroom materials.
- **Rich vocabulary development.** Building a large and robust vocabulary is a cornerstone to success in both conversational and academic English. *Bridge to Success* exposes learners to a wide range of vocabulary. Many opportunities for revising these words and using them in personalised, meaningful ways are woven into the activities and lesson plans.
- **Individualised learning.** We approach learning in an individual way by both acknowledging the individual nature of the knowledge and background of each child and encouraging their specific input. We also provide for differentiated learning in the classroom by offering a range of activities of varying difficulty and guidance for tailoring activities to the needs of different learners. Detailed support for this is provided in the lesson plans in this book.
- **Integrated assessment.** Throughout the course, teachers informally assess their learners' understanding of language and concepts. The Teacher's Guide provides suggestions for extending or re-teaching language skills based on learners' demonstrated proficiency. An end-of-unit Review in the Coursebook provides a simple-to-use evaluation measure: a quick progress check on learners' understanding of key ESL and early literacy skills. At the end of each unit, learners apply the skills and knowledge they have acquired as they work in groups to create and present a project. This provides teachers with an excellent performance assessment opportunity.

We hope that you and your learners will enjoy using these materials as much as we enjoyed developing them for you.

How to use *Bridge to Success*

A Components

Bridge to Success offers the following components:

- The **Coursebook** provides the core input of the course and consists of twelve thematic units of study. Each unit contains 17 and 18 lessons developed around a unifying theme. The materials feature skills-building tasks for listening, reading, writing and speaking, with each unit developing a language focus. In addition, there is a strong vocabulary-building element to the course.
Materials are aimed at the learner with all the experiences that they bring to the classroom. Learners are encouraged to see the moral and social values that exist in many of the course texts, and find opportunities to reflect on these. Learners need to be exposed to many different forms of text topics and styles in order to develop the skills of assessing, interpreting and responding appropriately to content. Therefore the course aims to provide a variety of factual and fictional texts, dialogues and poetry, on a range of different topics, at the appropriate level.
- The **Audio CDs** include all the listening material needed for the Coursebook. The listening material supports the Coursebook with listening and pronunciation. We recommend that learners are encouraged to use the Audio CDs at home to practise the songs and stories, and to show their parents what they know.
- The **Workbook** provides production, reinforcement and consolidation activities, as well as lead-in tasks to support the Coursebook.
- The **Teacher's Guide** includes the lesson plans for each lesson, providing guidance about how the Coursebook, Workbook and audio can be used in the classroom.
At the end of the Teacher's Guide, photocopiable activities (PCMs), cross-referenced in the lesson plans, provide extra support for selected lessons.

B Unit structure

Bridge to Success Grade 10 contains twelve units, spread over three terms. Each unit in the Grade 10 Coursebook is structured as follows:

- A central topic or theme is developed over 17 or 18 lessons.
- Each core lesson uses the Workbook to develop learners' language skills, as well as explore and develop content knowledge.
- Practise and Prepare lessons provide an opportunity for consolidation and recycling of vocabulary and skills. These lessons can be used to informally assess learners' progress, address misconceptions, and inform subsequent teaching strategies.
- A Review lesson provides an end-of-unit check of learning, giving the teacher a clear and regular view of learner progress.

- Each unit ends with two Project lessons, which provide an integrated skills focus. The first lesson provides learners with a challenge, which they will complete in preparation for the second lesson. In the second Project lesson, learners present their projects, and are guided to reflect on their own learning.

C *Bridge to Success* features

Bridge to Success uses a range of features to guide and support teaching and learning. These are used throughout the Coursebook, and may also be used in the Workbook:

- **Language Tip:** A concise tip to help illustrate key language points. These can be used to model examples for learners, or for learners to refer to independently for support during an activity.
- **Writing Tip:** A concise tip to support the development of writing skills, which can be used as a teaching item or reminder for learners of key writing principles.
- **Use of English:** A tutorial of a grammar point, explaining when the point applies and providing modelled examples. These features often pre-teach language points, which learners then apply through a following activity.
- **Vocabulary:** A simple definition to help learners understand new vocabulary within an activity.
- **Did You Know?:** An engaging fact to inspire learners, which can be used to prompt discussion, or as an extension opportunity.
- **Listening Strategy:** A pre-listening briefing that will help learners apply a range of different listening techniques, and enable learners to choose appropriate listening strategies depending on the requirements of the activity.
- **Reading Strategy:** A pre-reading briefing that will help learners apply a range of different reading techniques, and enable learners to choose appropriate reading strategies depending on the requirements of the activity.
- **Speaking Tip:** A concise tip to support learners in developing fluency, which can be used as preparation for a speaking task.

D Lesson plans

The lesson plans include all you need to know in order to successfully teach using the new Coursebook materials. These provide guidance for leading into and out of activities in the Coursebook and Workbook, as well as teacher-mediated activities.

The lesson plans contain a number of common elements to support you in understanding the lesson aims, and adapting your practice to suit learners' needs:

- **Learning objectives:** Skill-based high-level objectives that are being developed through this lesson.
- **Learning outcomes:** What learners will be able to achieve by the end of the lesson.

- **Link to prior learning:** How this lesson builds on prior knowledge and skills; this can be used to identify skills or knowledge to refresh learners' understanding at the start of the lesson.
- **21st Century Skills:** The 21st Century Skills or Themes developed through the lesson. Skills are generally developed through activities, whereas themes tend to be developed through the content of the lesson.
- **Key vocabulary and key expressions/structures:** Active language introduced, used or developed through this lesson.
- **Common misconceptions:** Highlights common errors or misconceptions; these can be targeted and addressed with intervention to ensure learners have a solid foundation.
- **Differentiation activities:** Adaptations for activities to suit learners who need more scaffolding or challenge.
- **Learning styles catered for:** The different learning styles addressed through this lesson plan. You can adapt these lessons using the Teaching Strategies to address different learning styles, depending on the learning preferences of your class.
- **Assessment for learning opportunities:** To be completed by the teacher, these identify different assessment for learning techniques, which may be applied in the lesson.
- **Standards/SLOs:** The principal SLOs from the UAE Ministry of Education EIL Framework that are addressed through this lesson.

E Customising your lessons

This Teacher's Guide provides a comprehensive set of lesson plans to support you in using the Coursebook, Workbook and accompanying audio. However, each teacher and each class is different, and we encourage you to reflect on what works for you and your learners, and to tailor lessons to ensure high-quality outcomes.

Before using the Coursebook

- Do warm-up activities: (TPR (total physical response), vocabulary games, discussions, etc.
- Pre-teach and practise key language that learners will encounter in the Coursebook and Audio CDs. (Try to make learning experiences concrete, interactive, motivating.)

While using the Coursebook

- Keep learners engaged in an active way.
- Use the illustrations as a conversation starter – ask learners to discuss what they think the image shows, etc.
- Vary the group dynamics in the lesson: move from whole group response to individual response to pairwork, etc.
- Provide opportunities for learners to ask questions, as well as to answer them.
- Encourage learners to identify their own misconceptions and mistakes through questioning.

- Encourage learners to use language structures and vocabulary to talk about their own ideas, opinions and experiences.
- In class discussions, nominate a learner to write ideas on class charts. You can refer back to these charts in later lessons.
- Adjust your reading and writing expectations and instructions to suit the literacy level of your learners.
- Use the Teaching Strategies section in this Teacher's Guide to adapt the different types of activity in the classroom, and to customise feedback strategies.

Using the Workbook and further suggestions

- Use the Workbook pages related to the Coursebook pages.
- Depending on the ability of the learners, use the stretch and support differentiation activities in the lesson plans to adapt the activities as required.
- Do a wrap-up activity or game at the end of every lesson.

F Assessment

We recommend that you take the time and opportunity to observe and monitor the progress and development of your learners. Many opportunities for informal assessment are provided through the Practise and Prepare lessons and end-of-unit projects as well as regular self-assessment opportunities.

At the beginning of the year, create individual portfolio folders to keep work that shows how the learners have been meeting the curriculum objectives. Use the portfolio to create a feeling of achievement and pride in learners about what they have achieved over the year. Keep this portfolio for parent–teacher meetings and send it home to show the parents/carers either at the end of each term or the end of the year. You might also want to include a letter to parents/carers outlining what the learners have achieved over the year.

Assessment for learning

Assessment for learning is a teaching strategy based around continual informal assessment of learner understanding, which then informs subsequent teaching decisions. Each lesson plan provides space and opportunities for you to apply assessment for learning techniques:

- **Observations:** Observing learners during tasks can help identify confidence, misconceptions, engagement and understanding of the task itself. This allows opportunities for individual interventions to address immediate learning needs.
- **Student self-assessment:** Self-assessments based around can-do statements provide an insight into learners' confidence of their own knowledge and skills, which can be used to address common or individual perceived weaknesses. It's important to combine self-assessment with other forms of formative assessment to ensure learners' confidence matches the accuracy of their understanding.

- **Oral questioning:** One of the simplest methods of eliciting feedback, oral questioning can help identify individual and group understanding. Questions may be directed at individual learners, groups of learners, or the whole class, although the teacher needs to make sure the feedback sessions are not dominated by the most confident learners. The feedback can inform whether learning points are reinforced, or whether the class is ready to move on.
- **Peer assessment:** Peer assessment develops learners' metacognition and their ability to articulate rules and conventions. The teacher should provide a model of peer assessment at the start of the activity to set out parameters, and to demonstrate constructive feedback. Peer assessment can be incorporated in a variety of ways:
 - Combined with oral questioning, peers can assess whether a learner's answer is correct, and if not, be encouraged to provide a correct answer and – if relevant – an explanation of why this is correct. This technique can help learners internalise and deepen their understanding through articulating rules and conventions in their own words.
 - As a differentiated activity, pairing able learners with those who need more support. The more able learners can provide support, reinforcing the strength of their own understanding through articulation and explanation.
 - As an extension to presentations, where peers ask questions of the presenters. This can help teachers assess the depth of understanding of both the presenters and the audience, and identify learning points to reinforce as a result.
 - Written work may be peer assessed, providing that learners have a clear marking guide to follow. Activities requiring objective answers (e.g. true/false, matching, etc.) can be facilitated quite easily, whereas more open-ended writing tasks may require dictionaries and teacher input to ensure the peer assessment is successful.
- **Quizzes:** Quizzes provide an objective measure of learners' knowledge, and can be run as competitive activities (e.g. backs to the board, see Teaching Strategies), paper-based tasks (e.g. an informal test) or online (e.g. a multiple-choice test, with instant feedback). Consideration needs to be given to the style of question (free response, multiple choice, etc.) and the breadth of the domain tested (e.g. whether the quiz tests a specific language point, the lessons' content, or broader). Regular use of quizzes can help build a data-informed picture of how the class is progressing, and whether there are areas of individual or collective weakness that need to be addressed.
- **Student presentation:** Presentations require learners to demonstrate their understanding and application of language. Misconceptions can be identified through directed questioning, which may be broadened out to the whole class through discussion, and addressed immediately through intervention.
- **Written work and feedback:** When learners submit written work, they should receive feedback as soon

after submission as possible. Feedback should be encouraging, but identify and address errors and misconceptions. Common misconceptions or errors in the class can be addressed through whole-class teaching or activities, whereas individual errors should be addressed one-on-one through feedback.

- **Feedback:** Regular feedback is a key feature of assessment for learning, and should be a part of each activity. An important function of feedback is to ensure learners acquire knowledge and skills correctly and accurately, so each lesson builds on solid foundations. Feedback can directly and informally reinforce learning points where required (e.g. correcting common spelling errors, pronunciation issues, grammar misconceptions, etc. during the activity), or include more formally structured teaching of specific points (e.g. addressing a misconception or weakness common to the class).

In addition to the highlighted techniques in the lesson plans, the following strategies can be applied to embed assessment for learning in the classroom:

- Using objectives and outcomes for measurable learning or meeting set criteria. Where learning outcomes are clearly measurable (for example, learners will be able to write a sentence in the past simple and the past continuous tenses), activities that require learners to demonstrate these specific outcomes can be used to assess learners' mastery of the skill or knowledge.
- Using technology to provide instant feedback. If your class has individual access to digital devices, a range of simple-but-powerful tools are available to support monitoring of individual and group understanding. Quizzes can provide a change of pace in the classroom and an element of competition (to which learners often respond well). Instant feedback can then be used to inform your teaching; is the class ready to move on, or does a key learning point need to be reinforced? Technology services supporting this technique include:
 - Kahoot (<https://getkahoot.com/>) enables you to create a learning game that can be used in the classroom. Requires individual device access and an Internet connection.
 - Nearpod (<https://nearpod.com/>) enables you to create an interactive presentation to share with your learners, and collect data. Nearpod can be used in the classroom, or as homework. Requires individual device access and an Internet connection.
 - Socrative (<http://www.socrative.com/>) enables you to use real-time questioning and real-time data to assess learner understanding. Requires individual device access and an Internet connection.

G Common mistakes

The Cambridge English Corpus is a multi-billion word collection of written, spoken and learner texts; it is the largest of its kind in the world. The Corpus breaks down into several smaller corpora, including the

Cambridge Learner Corpus, a unique 50 million word collection of exam scripts written by learners all over the world. Analysis of this resource has identified a number of common misconceptions and errors made by Arabic learners of English at CEFR A1, A2 and B1.

Spelling errors

Doubling and clusters of vowels appear to present a particular challenge for Arabic-speaking learners – for example, *quiet, because, friend, people, restaurant, beautiful, country, receive*. Silent consonants (*should, which, etc.*) and the silent *e* (*there, before, etc.*) also appear in the list of frequently mis-spelled words.

Target Word	Errors (in order of frequency)
because	becouse, becaus, becuse, beacuse
friend	ffrind, freind
different	diffrent
people	pepole, peaple, peopel, peopl
interesting	intersting, intresting
restaurant	resturant
beautiful	beatiful, beutiful
there	ther
before	befor
with	withe, whit
country	contry, contre
their	thier
together	togather
like	lik
receive	recieve, recive
which	wich
wishes	weshes, wiches, whishes
important	importent
should	shoud,
tomorrow	tomorow, tommorow, tommorrow
always	alway, allways

Missing a or an

This error is seen most frequently when an adverb and adjective intervene between the needed indefinite and the noun. This error is most frequently preceded by *it is* or *it's*.

- Example error: *It's very nice place.*
Corrected: *It's a very nice place.*

Missing the

The is frequently missing before nouns. Common nouns associated with this problem include: *same, UK, countryside, centre, internet, wedding, channel, cinema, city, museum, station, news, afternoon, same, weekend, USA, first, time, other*:

In addition, *the* is often missed before ordinals at the start of a sentence:

- Example error: *First thing I would like to tell you is that I love shopping.*
Corrected: *The first thing I would like to tell you is that I love shopping.*

Missing pronouns

It, you and *I* are the most frequently missing pronouns in the following instances:

- Missing *it* as an object pronoun: *My father gave me it when I was 13 years old.*
- Missing *you* as an object pronoun: *I want you to come with me.*
- Missing *I* as a subject pronoun: *I hope I see you soon.*

Missing conjunction

And is a common omission for Arabic learners.

Examples include:

- *It was full of flowers and green trees and there were places for cycling.*
- *There is a big sitting room, and there is a sofa, an armchair and a bookcase.*
- *My friend likes football and swimming.*

Missing be before adjectives in descriptions

The copula *be* presents a particular challenge as there is no *to be* in Arabic in the present tense. *Be* is the only significantly omitted verb, and because this error occurs with the present simple and progressive tenses, it needs particular attention from an early stage.

Frequent instances of this omission include:

- Missing *be* before adjectives in descriptions.
 - *I liked the competition because it was very interesting.*
 - *I will be very happy if you come*
 - *The theatre is near my house*
- Before the prepositions for talking about when or where something is or happens.
 - *My house is next to the bus station, opposite the bank.*
 - *Dinner time is at 6 o'clock in the evening.*
- Before –ing forms in the present continuous.
 - *The place I am staying in is amazing.*
 - *She is studying with me.*
 - *So we are planning to go to that park together.*

Verb agreement with be

As above, the lack of an equivalent for *to be* in the Present tense in Arabic is likely the source of the frequency of errors around verb agreements involving *be*:

- Example error: *Two men was near his car.*
Corrected: *Two men were near his car.*
- Example error: *Young people is important in society.*
Corrected: *Young people are important in society.*

Using in instead of at or on, and vice versa

Using *in* instead of *at* is the most frequent wrong-preposition error, followed by using *in* instead of *on*.

The most frequent instances of *in* instead of *at* concerns the following:

- With clock time when talking about times or occasions.
Example error: *The weather is very good in this time of year.*

Corrected: *The weather is very good at this time of year.*

- With *house* and *home*.
Example error: *Can you come to dinner with me in my house?*
Corrected: *Can you come to dinner with me at my house?*
- With *work*, *college*, *school*, *university*, etc.
Example error: *I met her in my work.*
Corrected: *I met her at my work.*
- In the phrase *at the weekend*.
Example error: *I really enjoyed shopping in the weekend.*
Corrected: *I really enjoyed shopping at the weekend.*
- With events, such as *party*, *wedding*, *concert*, etc.
Example error: *See you in the party.*
Corrected: *See you at the party.*

The most frequent instances of *in* instead of *on* concerns the following:

- With days of the week.
Example error: *I will visit you in Sunday at about 2 o'clock.*
Corrected: *I will visit you on Sunday at about 2 o'clock.*
- TV.
Example error: *Sometimes I see old serial dramas in TV.*
Corrected: *Sometimes I see old serial dramas on TV.*
- Day, birthday, holiday.
Example error: *We had a good time in this holiday.*
Corrected: *We had a good time on this holiday.*

Punctuation with apostrophes

Apostrophes are a common problem area for most groups of learners, not just learners whose first language is Arabic. The most frequent error types are listed below:

- Confusion between *I'm* and *I am*, resulting in *I'am*.
Example error: *I'am writing to tell you my news!*
Corrected: *I am writing to tell you my news!*
Or *I'm writing to tell you my news!*
- Confusion between *it's* and *its*.
Example error: *I've got a new phone. I like it's camera and it's screen.*
Corrected: *I've got a new phone. I like its camera and its screen.*
- Forming plural nouns with apostrophes, which may be a result of confusion with possessive 's'.
Example error: *My friend's gave me a mobile, but my parent's gave me a computer.*
Corrected: *My friends gave me a mobile, but my parents gave me a computer.*
- Using *its* in place of *it's*.
Example error: *Its a big place and its nice as well.*
Corrected: *It's a big place and it's nice as well.*
- Possessive *s* with missing apostrophe.
Example error: *My friends name is Dalal.*
Corrected: *My friend's name is Dalal.*

Overuse of *it* as a pronoun between subject and verb

This is a particularly frequent error for Arabic learners, although it is becoming more common among native speakers, especially in relative clauses:

- Example error: *You know I don't know if Oman's weather it will be very good.*
Corrected: *You know I don't know if Oman's weather will be very good.*
- Example error: *You can catch the bus that it stops across from our house.*
Corrected: *You can catch the bus that stops across from our house.*
- Example error: *The information you sent it to me by email was great.*
Corrected: *The information you sent to me by email was great.*

Over-long sentences

Sentence boundaries are a problem area for all learners (not just those with Arabic mother tongue), but not beginning a new sentence when required is by far the most frequent punctuation error of Arabic speakers. Run-on, or overly long sentences are common, even at lower levels where learners' language normally limits them to simple short sentences. Learners may construct short sentences, but neglect punctuation to mark the start and end of sentences.

Teaching Strategies Grades 10–12

Teaching Strategies Grades 10–12

This section provides definitions for a range of different teaching strategies that can be used in the classroom, as well as information on the rationale for each activity.

Teacher-led strategies (direct instruction)

Guided discovery

The teacher leads and supports the learners in the acquisition of skills and knowledge through modelling and step-by-step practice, until learners are able to apply the skills and knowledge independently.

Learners may be provided with an example of a language item in action, for example in a piece of text, and they are then supported and encouraged by the teacher to discover and summarise the rule themselves.

Independent reading

Independent reading encourages learners to read silently on their own with minimal guidance or interference from the teacher. It provides opportunity for learners to practise reading skills building fluency and confidence. They expand their knowledge as readers and build stamina. Learners may be provided with specific texts or a selection of varied reading material. For independent reading to be successful and enjoyable, learners should be able to access it at a 98% accuracy level.

Visual stimuli

Visual stimuli are an important component of individual learning materials, as well as of the classroom environment as a whole. Visual stimuli provoke discussion and engage learners in the lesson focus.

Learners are provided with visual stimuli such as images, cues, objects or environments to support them in making associations and connections in processing, memorising and recalling information.

Cloze

Cloze is used to assess literacy skills such as predicting meaning, developing vocabulary, applying prior knowledge and understanding textual information.

- Learners fill in or complete letters, words and phrases that are deliberately omitted from written or oral text.
- For support, learners may be separately provided with the letter, words and phrases that are required to complete the text.

Organised grouping strategies (cooperative)

Jigsaw

The jigsaw strategy uses the gradual culmination of smaller learner groups into larger groups to piece together information for a task.

- The teacher arranges the learners into small groups.
- Each small group or individual group member is assigned a different piece of information.

- Group members then join with members of other groups assigned the same piece of information, and research and/or share ideas about the information.
- Eventually, learners return to their original groups to piece together a clear picture of the topic at hand.

Mentoring

Learners are supported by an experienced or knowledgeable person who acts as a mentor. The term 'mentor' may refer to teacher-advisors, peer tutors and community mentors in a variety of settings.

- The teacher works with the mentor to create a support programme for the learner, which may be short-term or long-term depending on the learner's needs and the task requirements.
- The mentor provides one-on-one advice or training to support the learner in exploring ideas, taking risks, testing conclusions and obtaining feedback.

Peer practice

Learners work together in pairs or small groups (allocated by the teacher) to help each other to review, drill and rehearse to check knowledge, deepen understanding and develop skills.

Peer teaching

Learners (individuals or small groups) who are competent in a skill or knowledgeable in a topic act as 'experts' to teach what they know to their peers.

Socratic discussion

This process encourages divergent thinking rather than convergent. Participants feel a certain degree of emotional safety when they understand that this format is based on discussion and not debate. The goal is for learners to help one another understand the ideas, issues and values reflected in the text. They are responsible for facilitating a discussion around ideas in the text rather than asserting opinions.

- Learners are given the opportunity to examine a common piece of text.
- After reading the text, open-ended questions are posed and discussed.
- Open-ended questions allow learners to think critically, analyse multiple meanings, and express ideas with clarity and confidence.

Debate

A debate is a structured argument during which two teams of learners speak alternately for and against a controversial topic. It is a successful strategy used for improving speaking skills and is particularly helpful in providing experience in developing a convincing argument. Debates can be formal or informal.

- The teacher provides, or decides in collaboration with learners, a controversial topic.
- The teacher divides the class into two teams – those who agree and those who disagree with the controversial topic.

- Learners are given time to research, make notes and prepare their arguments.
- Learners from each team take turns to present their arguments as clearly and logically as possible.

Interview

A person (the interviewer) engages in a conversation with another (the interviewee) in order to gather personal information and opinion, practical experience and advice. The person interviewed is often an expert or a person in the role of an expert. The person being interviewed could be a teacher or learner in role, or an external expert.

Collaborative learning

Learners work together in pairs or small groups to solve a problem, complete a task or create a product. They participate in thoughtful discussion, and develop a more positive attitude about learning and each other by working together.

- Learners engage with one another and are responsible for making sure that everyone understands the task.
- The teacher facilitates collaborative learning by organising the learners into pairs or small groups that complement one another and by supporting the development of the group task.

Active strategies (activities)

Backs to the board

This is a competitive activity format that can be used to check vocabulary or knowledge.

- The teacher divides the class of learners into two or three groups.
- One learner from each group sits in a chair with their back to the board, facing their group.
- The teacher or a chosen learner writes a word on the board so that the learners sitting with their backs to the board cannot see the word.
- Each group provides hints to the learner from their group with their back to the board, who in turn attempt to guess the word.
- The first one to guess the word gets a point for their team.

Role-play

Learners act out or perform a particular role in order to explore and dramatise the thoughts, feelings and experiences of another person in a simulated situation.

- The role-play may be conducted between two learners, a small group or as a whole class led by the teacher.
- Role-play may be performed and presented to the whole class where other learners may be invited to make comment and analysis on the content.
- Some role-plays may be simple re-enactment but role-play can also include learners' own development and interpretation of a given scenario.

Experiential learning

Experiential can be defined as 'learning through reflection on doing'.

It is vital that individuals are encouraged to directly involve themselves in the experience, and then to reflect on their experiences using analytic skills, in order that they gain a better understanding of the new knowledge and retain the information for a longer time.

Games

A game may be played using print, digital media, simulation or contest (competitive or cooperative) according to a clear set of rules in order to challenge and motivate learners to learn. This strategy is highly engaging, but all learners should understand the objectives and process of the game before playing.

Reading diary

The use of a reading diary or a response journal encourages learners to regularly write personal reactions to texts, activities and experiences in any subject area.

Learners' reactions may be formal or informal and include exploring, analysing, questioning, interpreting and appreciating new ideas and experiences.

Reading diaries may be kept as a personal account shared between the learner and the teacher or may be used to present ideas and reflections to the class.

Learning log

A learning log is a diary in which learners record their experiences, efforts and feelings. Learners reflect upon what they are learning and how they are going about learning it. Learning logs are useful because they promote metacognition. They enable the teacher to understand learners' perceptions and reactions to the materials being taught.

- The teacher provides guiding questions to encourage the correct use of the learning log. A limited number of questions from which learners may choose and a selection of questions that learners are required to respond to.
- The teacher provides time for learners to write in their learning log at regular opportunities.

Journals

A journal is an informal writing notebook used for a multitude of relaxed and creative writing opportunities. Learners are encouraged to write in a more fluid and natural manner than in other writing tasks. The teacher may encourage writing activities such as personal reflections, character writing, vocabulary stories or any other relevant topics.

The teacher may or may not mark the journal entries for accuracy but instead might provide a written response to the content. The teacher's response becomes similar to an ongoing dialogue with the learner and encourages them to write freely and confidently.

Some teachers extend the concept of a writing journal to encourage learners to contribute written articles or blogs for the online school blog or website.

Book reports

Writing a report about a book they have read encourages learners to think and write critically.

Learners practise describing, sequencing, expressing and justifying opinions whilst reviewing, summarising or commenting upon a book they have recently read. The teacher may provide a specific format or structure the learners should follow which may include details such as: book details, setting, characters, story and reader's thoughts.

Projects/presentation

Learners learn about a subject by working for an extended period of time on a project to investigate and respond to a complex question, challenge or problem. Project tasks contrast with paper-based, rote memorisation, or teacher-led instruction that simply present established facts or portray a smooth path to knowledge by instead posing questions, problems or scenarios. The project may be set by the teacher or may have initial input from the learners.

- The teacher should support the project by providing success criteria and access to resources that the learners may need to facilitate and develop their project.
- Projects may be presented to the class and learners may be asked to explain the process and outcome of their project.

Multimedia learning (video)

Learners may access ICT-based teaching resources provided by the teacher to facilitate learning such as audio and video extracts used within lessons to demonstrate vocabulary and speaking. Learners may also use ICT-based resources, such as interactive software or audio devices to record their own dialogues, to create projects and complete tasks.

Hot seating

The teacher decides on a specific conversation topic to frame the activity. This topic may be related to the current Coursebook unit (e.g. shopping, health care, holidays) or focused on a particular language structure being studied (e.g. the past tense, conditionals or descriptive vocabulary).

- One learner volunteers or is selected by the teacher to sit in the 'hot seat' chair at the front of the room.
- While in the hot seat, the learner has control of the class. They are responsible for selecting learners who have a question and addressing them directly by name, rather than looking at the teacher to facilitate the communication.
- The audience is responsible for listening to one another's questions and helping one another to ask appropriate questions, to incorporate pre-determined themes, vocabulary or grammar structures as much as possible, and to avoid repetition of questions.
- The teacher acts as a facilitator and support to provide prompts, model dialogue and encourage the progression of the session.

Reading race

The teacher prepares questions about the details of a text; these questions should be objective and have one clear defined answer. This activity can work both

before learners read a text and as a review activity when learners have finished the reading.

- The teacher organises learners into pairs with each learner having a copy of the text in front of them. Enough copies of the questions should be available for each pair.
- Learners are provided with the first question and race to find the correct answer. Once found, one partner should run their written answer to the teacher.
- If the answer is correct, learners are provided with the second question.
- The process is repeated until a group has answered all of the questions correctly.

This activity can be adapted to incorporate many versions of learners in pairs or small groups 'racing' one another to read pieces of text and find information as guided by the teacher.

Running dictations

Through this activity learners practise reading, speaking, listening and writing; have to work together; and are also responsible for checking their own work.

- The teacher prepares two short texts, each taped to a wall.
- Learners are organised into pairs, with one learner being the writer and the other being the runner.
- The runner must run to the board where the first paragraph is displayed, read the text, run back to his or her partner, and repeat what he or she read.
- The writer's job is to listen to the runner and write down what is said. Usually it takes many trips to and from the board for the runner to relay the entire paragraph to the writer.
- When most groups are done, the writer can check the passage against what is displayed, and then roles are reversed and the second paragraph is used.

'Find someone who ...'

The teacher tells the learners that they will ask each other questions. The goal is to ask everyone in class until the learners find someone who does that activity, has that characteristic, or can answer the question.

- The teacher prepares a selection of 'find someone who...' statements using vocabulary or concepts that relate to the current unit of study. For example, if you are teaching a unit on jobs: 'Find someone who can list tasks a farmer might have', 'Find someone who can describe the job of a doctor', etc.
- The teacher creates a variety of statements so that it will be easy to find a person with some characteristics, but not so easy to find others.

Strategies to promote thinking and problem solving (analysis)

Brainstorming

Learners share and record questions, ideas and examples that come to mind (without judgement or censure) about a central idea, topic, or problem. Brainstorming is often presented visually using colourful posters that can be created by learners in small groups and presented to the rest of the class.

Mind map

A mind map is a visual and memorable way to organise, develop and record ideas. It is often created as a large colourful poster with the central key concept, idea or question placed in the middle of the diagram. Ideas and thoughts are then added as branches that radiate from the central point.

When ideas are added they can be grouped and connected through the system of branches. Using colours, symbols, words and images appeals to different learning styles and makes the process memorable for learners. Using a mind mapping strategy is helpful for making sense of new concepts, planning, organising, analysing and communicating ideas, thoughts and information.

Problem-solving

Learners use a variety of reasoning skills (e.g. inductive reasoning, deductive reasoning, exploring contrary examples, etc.) led by the teacher to engage a line of inquiry.

Problem-solving includes generating questions, making and carrying out a plan, testing hypotheses, constructing organised proofs and arguments, justifying conclusions, and eventually resolving a problem or mystery.

Opinion forming

Learners may receive a quotation from a text (before it is read) that includes evidence for one side or the other of an issue or argument. Learners share their quotations and their evolving opinions, with reasons and evidence to support them.

Alternatively the teacher makes a statement and encourages learners to form an opinion for or against the statement. Learners may be asked to move physically to opposing sides of the classroom to demonstrate their opinion. The teacher may then ask questions to encourage learners to justify and rationalise their opinions.

Reflection

Learners think deeply or carefully about information, an investigation or problem in order to clarify their understanding in light of previous experience. Reflection may:

- include both formal and informal ways to think about the 'why' and 'how' of learning (e.g. in a journal or response log)
- incorporate wait time before learners respond to a question
- require learners to complete a criteria-based checklist as a group following an activity.

Problem-based Learning (PBL)

- The teacher sets the learners a problem-based task.
- Learners are organised into small groups by the teacher, and then brainstorm ideas. They identify what they know about the problem and what they don't know, but must learn in order to solve the problem.

- Learners then develop an action plan for research and discuss the topics and concepts researched, eventually coming to some agreement on the best resolution.
- The teacher acts as a facilitator to guide the learners through the process, ask relevant and probing questions and provide resources that the learners need to solve the problem-based task.

Challenge-based Learning (CBL)

CBL is a collaborative learning experience in which teachers and learners work together to learn about compelling issues, propose solutions to real problems and take action. The approach mirrors the 21st century workplace and requires learners to reflect on their learning, the impact of their actions and publish their solutions to a wide audience.

- The teacher works with the learners to identify the big idea.
- Learners identify guiding questions (what they need to know) and identify resources and activities to answer these.
- Learners research, document and develop a solution and then identify steps to carry out their plan.
- Learners implement their solutions, measure outcomes, reflect on what worked and determine progress made.
- Learners are encouraged to keep written, audio or video journals throughout the process and use these to share their projects with a wider audience.

Task-based Learning (TBL)

In a task-based learning scenario, the lesson is based around the completion of a central task and the language studied is determined by what happens as the learners complete it. It enables more varied and natural exposure to language and a strong communicative approach.

- The teacher introduces the topic and gives the learners clear instructions on what they will need to do during the task. The teacher might provide some useful vocabulary to support the learners.
- Learners complete the task in pairs or groups whilst the teacher monitors and offers encouragement.
- Learners prepare a short oral or written report and feedback to the whole class on what happened during the task.
- The teacher highlights relevant parts of the report and uses this to inform areas for the learners to participate in further practice.

Now say them naturally, pronouncing the underlined words in their weak forms: <i>I really enjoy having <u>a</u> task <u>to</u> do</i>. Ask learners if they can hear the difference. 2. Refer learners to the <i>Speaking tip</i> box and model the sentence for the class, emphasising the weak forms. 3. Before playing the audio, write some simple phrases on the board that the learners know, for example <i>a kilo of rice, a bar of chocolate, a blue T-shirt, a lot of time</i>. Elicit the words that have weak forms and underline them (<i><u>a</u> kilo <u>of</u> rice, <u>a</u> bar <u>of</u> chocolate, <u>a</u> blue T-shirt, <u>a</u> lot <u>of</u> time</i>). Drill as a class activity, each time speaking faster and faster, so that it becomes natural for learners to use the weak forms appropriately. This could also be practised in pairs or small groups. 4. Play the audio and pause after each sentence for learners to repeat. Practise saying the sentences at different speeds. As before, the faster they speak the easier it will be to say the words with weak sounds correctly. 5. Drill as a class, in groups or in teams. 6. In pairs, learners practise saying the sentences to each other. The class might become quite noisy, but this will make it fun and give shy students the confidence to participate. <p>CORE</p> <p>Feedback</p> <p>Invite some confident learners to demonstrate the sentences for the class.</p> <p>Answers</p> <p>1 I really enjoy having <u>a</u> task <u>to</u> do; 2 You <u>can</u> download <u>the</u> software from this website; 3 Sometimes, traditional learning isn't <u>as</u> difficult <u>as</u> e-learning; 4 <u>Do</u> <u>you</u> prefer making notes with <u>a</u> pen <u>and</u> paper?; 5 We had <u>to</u> <u>do</u> <u>a</u> WebQuest this week; 6 There wasn't time <u>to</u> watch <u>the</u> webinar.</p>

Resources	Starter
	<p>1. Write <i>university</i> on the board. Ask learners to call out any words that come to mind and write them around it.</p> <p>Feedback Elicit answers in open class.</p> <p>2. Ask learners what universities they know in their country and in other countries. Brainstorm ideas. Which is the most famous in the UAE? Which is the most famous abroad?</p> <p>Feedback Write these on the board.</p>
Resources	Main activity
Coursebook page 18	<p>Reading: Activity 1</p> <p>1. Books closed. Tell the class they will do a <i>dictogloss</i>. Explain: <i>You will read out a short text about going to university. Learners listen and try to remember the information. Read the text once only. Give learners two minutes to write down individually what they can remember. Learners compare their ideas with a partner and amend their texts accordingly. Put two pairs together. Monitor and listen to the language learners are using to negotiate the meaning. (The text is from CB Activity 1 as follows:)</i></p> <p><i>Is going to university always the best option? There are many reasons why going to university is best, for example you can study a subject to a much higher level. However, there are also reasons to support other ways of getting a good job. In this text, I shall look at the advantages and disadvantages of a university education and then decide whether it is the best option.</i></p> <p>2. Learners compare their text with the original in the Coursebook.</p> <p>3. Read the questions at the start of the activity and check for comprehension.</p> <p>4. In pairs, learners discuss their ideas.</p> <p>5. Elicit <i>the introduction or at the beginning of the text</i>. Then go through the question/sentences in the introduction and ask about their function. (The opening question creates interest and orientates reader to get them thinking about the topic; the second and third sentences are giving an idea about the main content, of the complete text; the last sentence is giving reader an indication about how the text will be organised.)</p> <p>6. In pairs, learners discuss what they think might be included in the rest of the text. Explain that this just refers to the type of content rather than the actual content but they can think about advantages and disadvantages in their discussions.</p> <p>CORE</p> <p>Feedback Elicit ideas as a class.</p> <hr/> <p>Differentiation activities (Support):</p> <p>1. Put learners in mixed-ability pairs and groups.</p> <hr/> <p>Differentiation activities (Stretch):</p> <p>1. Ask learners to use metalanguage when reconstructing the text. For example <i>This is a capital letter. The beginning of a sentence always starts with a capital letter.</i></p>

<p>Workbook page 18</p>	<p>Workbook: Activities 1 and 2</p> <p>1. In pairs, learners read the words and mark the words they know / don't know as indicated individually. (It doesn't matter about pronunciation at the moment.) Alternative: If this activity is done in class, divide the class into groups. Ask each learner to choose four words they are not sure of or don't know and find the meanings in their dictionaries. Learners then share what they have found out with their group.</p> <p>2. Learners complete the table in Activity 2 based on how they marked the words in Activity 1.</p> <p>CORE Feedback Encourage peer review and peer teaching.</p>
<p>Workbook page 18</p>	<p>Workbook: Activity 3</p> <p>1. In pairs, learners label the university campus. Advise them that there are no right and wrong answers – they can plan this to their own design.</p>
<p>Coursebook page 18</p>	<p>Reading: Activity 2</p> <p>1. Write <i>Cambridge University</i> on the board. Ask learners what they think might be included in an introduction to a text about Cambridge University. Elicit ideas as a class. (Possible answer: General statement about the text; brief summary of the text content; sentence explaining how the text will be organised.)</p> <p>2. In pairs, learners read through the three texts and decide the order based on the discussion.</p> <p>CORE Feedback Elicit answers as a class. Highlight how the opening sentence sets the scene of the text to follow (1). Then highlight the middle text (2), which is a short summary of what is to follow. Highlight how the last sentence (3) orientates the reader to what will be included in the rest of the text.</p> <p>Answers</p> <p>3; 2; 1</p>
<p>Coursebook page 18</p>	<p>Speaking: Activity 3</p> <p>1. In pairs, learners discuss possible content for the rest of the text, based on the first paragraph.</p> <p>2. They then work with another pair to compare their ideas. Monitor and assist as necessary.</p> <p>CORE Feedback Elicit answers as a class. Ask learners to give reasons for their ideas.</p>
<p>Coursebook page 18</p>	<p>Reading: Activity 4</p> <p>1. Before the learners read the complete text, organise a jigsaw reading. Divide the class into three groups A, B and C. Give each group a copy of one of the paragraphs. Tell them to read it and try to remember the main details.</p> <p>2. Regroup the learners so there is one learner from each of groups A, B and C in the new group. Tell learners to put their texts away (or hand in). Learners explain to the group what was in their text. Then, together, they try to work out the order of the paragraphs giving reasons why.</p> <p>3. Tell learners to read the completed text in Activity 4 and compare their ideas.</p> <p>4. Learners underline the first sentence in each paragraph. Then they discuss how these sentences introduce the content of the respective paragraphs.</p>

	Differentiation activities (Support): 1. Put learners in mixed-ability pairs and groups. Learners work on one of the paragraphs only.		
	Differentiation activities (Stretch): 1. In pairs, learners summarise the information in each paragraph as bullet points. They use this to retell the text to another pair just using the bullet points.

	<p>1. Repeat the following phrase: <i>Stand up if you are good at ...</i> substituting at the end each time: <i>languages / maths / sports / music / mixing with other people / giving and following directions / being alone.</i></p> <p>Feedback</p> <p>The whole class should now be standing. Ask a few learners why they think they are good at this skill.</p>
Resources	Main activity
Coursebook page 23	<p>Project goal</p> <p>1. Read the opening bullet out to the class to focus them on what the object of the project is.</p>
Coursebook page 23	<p>Project research and planning: Activity 1</p> <p>1. Write the word <i>intelligence</i> on the board. Ask learners to check their dictionary for a definition (for example, <i>the ability to learn, understand, apply knowledge</i>). Write the word <i>inherited</i> on the board. Ask learners to check their dictionary for a definition (for example, <i>something (a characteristic) that you get from your parents when you are born</i>).</p> <p>2. Simplify the meaning of the questions in Activity 1 if necessary, for example:</p> <ul style="list-style-type: none"> • <i>Are you clever because your parents are clever or because you study hard?</i> • <i>Do you know anyone who didn't go to school, but you think they are very clever?</i> • <i>Is intelligence only about being good at school work or about other skills?</i> <p>3. In pairs, learners complete the activity. Monitor and support discussions by asking for further clarification, for example <i>Why do you think intelligence is inherited / comes from your parents? Can you give me an example?</i> Possible learner response: <i>My mother is good at maths and so am I.</i></p>
Coursebook page 23	<p>Project research and planning: Activity 2</p> <p>1. Model the first question: say <i>Number 1: word smart. That's h: you like playing word games, reading and writing stories.</i></p> <p>2. Learners complete the activity individually.</p> <p>Feedback</p> <p>Elicit answers and check as a class.</p> <p style="background-color: #d3d3d3; padding: 5px;">Answers</p> <p>1 h; 2 a; 3 g; 4 b; 5 c; 6 d; 7 e; 8 f</p>
Coursebook page 23	<p>Project research and planning: Activity 3</p> <p>1. Model the questions in the class survey yourself and with different learners.</p> <p>2. Divide the class into two groups or if the class is small, let the whole class do the activity with each other. Learners ask ten other learners all the survey questions and classify the interviewees' responses under the correct MI category. Explain that a 5-bar gate tally makes it easy to calculate a large data sample, for example $4 \times \text{ } = 4 \times 5 = 20$ responses. Monitor the learners and ensure they don't give the survey to their interviewee to complete – they must speak together to collect and then classify the data.</p> <p>3. Tell learners they will need this data in the next lesson.</p>

Coursebook page 23	Project research and planning: Activity 4		
	1. Refer learners to the example discussion. Revise contrasting language: <i>however, on the other hand</i> .

Ask learners to listen the first time to get an overall understanding of the text and to start thinking about Paul's point of view. 3. Ask learners how Paul feels about Silicon Valley (<i>he is excited and enthusiastic</i>). Discuss how they know this. 4. Explain that the way Paul speaks shows that he is interested and excited. 5. Refer learners to the <i>Listening strategy</i> box and read out the phrases for the class. Go around the class inviting learners to provide their own examples using one of these three phrases. Explain that these phrases are used to give an opinion on a topic, rather than facts. Paul says positive things after these phrases, so we can tell that his point of view is positive. 6. Play the audio again, pausing after you hear each of the phrases. 7. Read through the <i>Speaking tip</i> box with the class and explain that these phrases are used when you want to check that you have understood what another person has said to you. 8. Play the audio again, pausing after you hear each of the phrases. 9. Then ask a confident learner to say any statement to you. Clarify what he or she says, using one of the phrases. 10. 	<ol style="list-style-type: none"> Write <i>advantage</i> and <i>disadvantage</i> on the board. Read out some statements from the reading text in Activity 1 and ask learners if it's an advantage or a disadvantage of driverless cars, for example <i>People feel it can be safer.</i> (advantage). Do a tally count to find out if there are more perceived advantages or disadvantages. If learners disagree with the consensus, ask them to justify their reasoning.
Resources	Main activity
Coursebook page 48	<p>Language focus: Use of English</p> <ol style="list-style-type: none"> Say to the class <i>I will soon be having lunch.</i> or <i>I will soon be going home.</i> Explain that this tense is called the future continuous. Ask learners to go back through the reading text in Activity 1 and underline examples of this (<i>we'll soon be seeing them, will soon be hitting our streets, will be taking people on journeys</i>). Read through <i>the Use of English</i> box with the class and check understanding of the concept. Ask learners to read the example sentences. Go through the different time markers and explain that the future events we are discussing can be close or far away in time. Check understanding of the point about contractions. Give a few example sentences and ask which ones we would contract, for example <i>Anna will be jogging tomorrow. She'll be swimming on Thursday.</i> Finally, look at the point on negative sentences. Give some positive sentences and elicit the negative forms. <p>CORE</p>

Check understanding of the three strands of the discussion. If you prefer, you can write these up on the board as separate points, to remind learners to cover all of the topics. 3. If possible, give learners access to the Internet to help them research their ideas. If this isn't possible, they could do research at home or in the library, and bring their ideas to class. Encourage them to do their own research into driverless cars, in order to expand what they have learned from the initial text. Encourage them to look for data and statistics to support their ideas about safety, and the number of driverless car trials. 4. Use one group as an example to role-play the start of the discussion. Resources	Starter
Coursebook page 60	<ol style="list-style-type: none"> 1. Introduce the topic by asking learners what they know about the history and culture of Arab dhows, and how often they see these. 2. Ask a learner to do a simple drawing of a dhow on the board (or do this yourself). This is for visual stimulation at this point, but will be used for labelling in the first activity. 3. Read the opening questions with the class. Ask each one in turn and elicit ideas.

When this stage is completed, ask learners to think of sentences using these words, to check they have understood the part of speech. You can give an example to start the activity: <i>Sails help a boat to move in the wind.</i> 4. Now invite learners to come out and label the <i>sail</i>, <i>mast</i> and <i>hull</i> of the drawing on the board. Ask if anyone can add <i>rope</i> and <i>plank</i>. <p>CORE</p>

Ask learners to listen the first time to get an overall understanding of the text and to start thinking about what techniques are used in modern times. 4. Play the audio again, pausing in regular places to give learners time to write down any words they don't understand. Put learners in pairs to compare their lists of words and see if they can help each other with the meaning. 5. Discuss what words they might expect to hear in a presentation on this topic. Go through these as a class and write up their suggestions on the board. Provide translations, and find out if any of these words match the unknown words in the audio. 6. Revisit the gist question. Coursebook page 70	<p>Reading: Activity 1</p> <p>1. Describe an animal for the class to guess: <i>This animal is grey. It's got four legs and a large body. It has one horn in the middle of its head. It's got two small eyes on the side of its head. It can be very dangerous. What is it? (rhinoceros/rhino)</i></p> <p>2. Invite learners to describe different animals for the class to guess. Encourage them to describe different types of animals from different countries.</p> <p>3. Refer learners to the photo. Nominate a learner to describe the animal. Elicit or teach <i>stripes, pattern, unique, make up</i> and <i>features</i> but do not say the word <i>zebra</i>. (You could note that the noun <i>make-up</i> (cosmetics) usually has a hyphen, and is pronounced differently to the phrasal verb <i>make up</i>.)</p> <p>4. Read the rubric aloud.</p> <p>5. Learners open their Coursebooks and, in pairs, discuss the opening questions.</p> <p>Feedback Elicit ideas.</p>
Resources	Main activity
Coursebook page 82	<p>Reading: Activity 1</p> <p>1. Ask learners to look at the photo and read the gist question first, to help them focus on the text.</p> <p>2. Allow one to two minutes for learners to read through the text quietly.</p> <p>3. Learners can discuss their responses to the gist question in pairs, then share as a class.</p> <p>CORE</p> <p>Feedback Read out the gist question again and elicit answers.</p> <p>Answer</p> <p>Water can help with memory and concentration, so it is useful for students.</p>
Coursebook page 82	<p>Reading: Activity 2</p> <p>1. Check initial comprehension by asking learners to complete the sentences. Remind them to eliminate options by filling in more obvious answers first. Advise them that there is a distractor in the word box.</p> <p>CORE</p> <p>Feedback Check answers by asking learners to read out the completed sentences.</p> <p>Answers</p> <p>1 exercise; 2 bottled water; 3 hydrated; 4 fluid; 5 kidneys; 6 memory; 7 tired; 8 skin</p> <p>Differentiation activities (Support):</p> <p>1. Tell learners to look at the words in the word box carefully and to think about what part of speech they are. Encourage them to use dictionaries to help with this. Help learners to locate the area of each text which contains the vocabulary they need.</p> <p>Differentiation activities (Stretch):</p> <p>1. Ask learners to look at other words in the text which they found difficult. They can make a note of these and check the definition in a dictionary, then write a new sentence for each word.</p>
Coursebook page 82	<p>Reading: Activity 3</p> <p>1. Read through the statements and ask the class to think about each one. They can discuss in pairs whether each one is true or false. Remind learners to give reasons for their answers, to demonstrate their understanding.</p> <p>CORE</p> <p>Feedback Read out each statement and have learners stand up if they think it's true.</p> <p>Answers</p> <p>1, 3 and 4 are true</p>

<p>Workbook page 70</p>	<p>Workbook: Activity 1</p> <p>1. This activity tests overall understanding of the text. Look at the headings and ask learners make notes from memory on the health benefits of water for each category. If learners find this difficult alone, allow them to work in pairs.</p> <p>CORE</p> <p>Feedback</p> <p>Read out each heading and ask the class for the health benefits. For <i>General health</i>, ask if learners have any other suggestions they would like to add.</p> <p>Answers</p> <p>Brain: good for memory, helps us think and focus; Skin: keep skin clear and fresh; Teeth: no sugar, so better than fizzy drinks; Weight: helps you feel full so you eat less; General health: helps your kidneys work well, allows muscles to work properly, prevents headaches</p>
<p>Workbook page 70</p>	<p>Workbook: Activity 2</p> <p>1. These questions require a greater degree of engagement with the text. Remind learners to answer in full sentences and to give as much information as they can.</p> <p>2. Put learners in pairs to discuss their ideas.</p> <p>CORE</p> <p>Feedback</p> <p>Read out each question and elicit ideas.</p> <p>Possible answers</p> <p>1 Our brain is mostly made of water, so we need plenty of water for our brain to work well; 2 Our kidneys get rid of harmful substances from our bodies; 3 Water can make you feel full, so you eat less. It also helps you digest your food; 4 You lose water as sweat on a hot day, so you have to replace this; 6 Signs of dehydration include headaches, feeling tired and forgetful, and having dry mouth, skin and eyes.</p>
<p>Workbook page 71</p>	<p>Workbook: Activity 3</p> <p>1. This activity shows how different points of view can be expressed by an author, and asks learners to think about purpose.</p> <p>2. Read the sentences out loud to give learners the context of intonation to help them.</p> <p>3. Do the first example together. Focus on how we know that ‘b’ is the correct answer: <i>The author gives two reasons why they are good for you.</i></p> <p>CORE</p> <p>Feedback</p> <p>Nominate three learners to read out a text each along with the correct answer.</p> <p>Possible answers</p> <p>1 b; 2 a; 3 c</p>
<p>Resources</p>	<p>Plenary</p> <p>1. Say one of the health benefits of water, for example <i>There is no sugar</i>. Ask learners to say which part of the body this benefits (<i>teeth</i>). If learners are confident, ask them to take your role.</p>

Resources	Main activity
Coursebook page 85	<p>Reading: Activity 5</p> <p>1. Explain to learners that they should tick only the six statements that they think are most important. Check the comprehension of the statements by asking targeted questions, for example <i>Does avoiding fast food mean never eating fast food? Can anyone give me an example of thinking positively? What does it mean to think negatively?</i></p> <p>2. Learners complete the quiz. Monitor learners and assist with the meaning of the statements where necessary.</p> <p>CORE</p>
Coursebook page 85	<p>Reading: Activity 6</p> <p>1. Learners check their answers from Activity 5 against the analysis to find out which category applies to them. Workbook page 73	<p>Workbook: Activity 2</p> <p>1. Model the examples of direct and indirect questions with the learners.</p> <p>2. Ask learners to describe the first picture. Possible responses: <i>He's confused, he's lost,</i> etc. Tell learners that he would need to ask for information politely so his indirect question would include a question phrase, such as <i>Could you tell me ...</i></p> <p>3. Ask learners to describe the second picture. Possible responses: <i>He's in the gym, he's exercising,</i> etc. Tell learners that if you wanted to know more about him you would probably use an indirect question which would be more like a statement, such as <i>I wonder why ...</i></p> <p>4. Learners complete the indirect questions individually. Monitor learners and assist with language structure where necessary – remind them that subject and verb in indirect questions are sometimes in reverse order to that in direct questions (unless the direct question contains forms of <i>do</i>).</p>

In groups, learners take turns to read one of their sentences to their group. After reading their sentence, the other learners guess whether they think it is true or false. If they guess correctly, they get a point. If they guess incorrectly, the learner who read the sentence gets a point. The winner is the learner with the most points.</p> <p>2. Refer learners to the example responses and tell them they should exaggerate using stress and intonation in their responses. Model one or two of the example sentences. Monitor the groups and assist where necessary.</p> <p>CORE</p> <p>Feedback</p> <p>Find out which learner had most points.</p>
<p>Resources</p>	<p>Plenary</p> <p>1. <p>Workbook page 78</p>	<p>Workbook: Activity 1 1. Explain that another way to remember a list or important lexis is to use a <i>mnemonic</i>. Explain that to create a mnemonic we take the first letter of the words in the list we need to remember and make a new sentence starting with those letters. The sentence needs to be memorable itself. Use the first question as an example. The common mnemonic used in the UK is <i>Richard of York Gave Battle In Vain</i>. Learners come up with their own mnemonic for the sequence. 2. In pairs, learners complete the activity. 3. If completed at home, tell learners they need to try different strategies to remember the parts of the human brain. If completed in class, refer learners to the diagram of the human brain. Tell them they are going to learn the different parts of the brain using one of the techniques that they found worked the best for them. DESIRABLE</p>
<p>Workbook page 78</p>	<p>Workbook: Activity 2 1. Give learners 30 seconds to look at the diagram in Activity 1 and memorise the parts of the brain using the technique they chose. 2. Initially, encourage learners to try and remember the words without referring to the words in the text box. Then they can use the word prompts if necessary. 4. In pairs, learners compare their ideas. Give each team a board marker. Call out a large number or percentage. The first member of each team goes to the board and writes the number/percentage. The first team to write the number correctly gets one point. Repeat until all team members have had a go. Encourage learners to support each other with numbers they are not sure about. They can call out but remind them the other teams will hear! Do a practise run. Say <i>Five million</i>. The first team members run to the board and write <i>5,000,000</i>. Alternative: Teams could write the answers on pieces of A4 paper and hold them up. Clean the board. Write <i>80%</i>. Ask learners what they think that might represent in relation to the brain. Elicit ideas. At this point, accept all ideas but don't give the answer. Put learners in pairs. One learner is A and the other B. Distribute copies the brain data table (PCM 16). Resources	Starter
Coursebook page 95	<ol style="list-style-type: none"> 1. Introduce the topic. Ask one of the learners to turn on the classroom light. If there are other lights, electrical devices (fans, air-conditioning, overhead projector) in the classroom, ask learners to turn them on. Then stop and look as though you are thinking. Then ask <i>Do we need that light on?</i> Elicit <i>No</i>, and ask a learner to turn it off. Continue with other devices that have been turned on. 2. Read the opening questions with the class. Ask each one in turn and elicit ideas. Write any useful ideas up on the board for visual reference.
Resources	Main activity
Coursebook page 95 PCM 1	<p>Listening: Activity 1</p> <ol style="list-style-type: none"> 1. Model the words for the class, then ask individual learners to read the words aloud. 2. Distribute dictionaries and copies of the vocabulary table (PCM 1) and allow time for learners to look up the words and record the meanings. 3. When this stage is completed, ask learners to think of sentences using these words, to check they have understood the part of speech. You can give an example to start the activity: <i>We can reduce our carbon footprint by walking instead of driving a car.</i> <p>CORE</p>
Coursebook page 95 Audio Track 33	<p>Listening: Activity 2</p> <ol style="list-style-type: none"> 1. Ask learners to read the question. Ask the class what they already know about Masdar City, and share ideas around the class. Check understanding of the question. You could ask learners to think about possible reasons why it might be a nice place to walk before they listen. 2. Play the audio. Ask learners to listen the first time to get an overall understanding of the text and what Masdar City is like. 3. Ask the gist question in open class, and elicit ideas (<i>there is no traffic, and the streets are cool</i>). Ask learners to think about how that compares with where they live. Is it similar or different? <p>CORE</p>
Coursebook page 95 Audio Track 33	<p>Listening: Activity 3</p> <ol style="list-style-type: none"> 1. Ask if they can remember any details from the audio before they read the word box. 2. Let learners work through the gapped summary, making sensible guesses based on the part of speech if they can't recall the information. For instance, for gap 5, they may mark <i>2008 / 2010?</i> This is the kind of information which can be checked on listening to the material again. Remind learners to eliminate options by filling in more obvious answers first. Advise learners that there is a distractor in the word box. 3. Read through the <i>Listening strategy</i> with the class. These simple stages can improve learners' performance in listening tasks. Remind them of the importance of checking what information is required before listening. 4. Play the audio again. Learners listen and check their answers. Ask around the class to see how much they remembered correctly. <p>CORE</p> <p>Feedback</p> <p>Read out each statement and encourage the class to answer.</p> <p>Answers</p> <p>1 desert; 2 17; 3 2008; 4 six; 5 2010; 6 carbon; 7 clean; 8 45; 9 traditional; 10 natural; 11 university; 12 research; 13 eco-friendly</p>

	<p>Differentiation activities (Support):</p> <p>1. For the first gap, ask what kind of information is missing – is it a place, a number, a date, etc? (<i>a place</i>). Ask them to look through the options in the word box and see which words would fit in this gap. (<i>desert/university</i>). Ask them to think which of these is the most likely (<i>desert</i>). Repeat with the next gap, then let learners work in pairs.</p> <p>Differentiation activities (Stretch):</p> <p>1. Ask learners to cover up the word box and try to complete the information from memory. If they can't remember the details from the text, ask them to think what kind of information will go in each gap, and to make logical guesses about the words needed.</p>
<p>Workbook page 80</p>	<p>Workbook: Activity 1</p> <p>1. This activity checks understanding of noun + noun collocations used in the text which are related to the topic. Ask learners to read and match the phrases.</p> <p>2. You can extend this by asking learners to work in pairs to make sentences using each of these collocations.</p> <p>CORE</p> <p>Answers</p> <p>1 e; 2 c; 3 b; 4 f; 5 d; 6 a</p>
<p>Workbook page 80</p>	<p>Workbook: Activity 2</p> <p>1. Explain that this extract is from the text. Learners may find it helpful to see the written form.</p> <p>2. Ask learners to read through the words in the box and think about what part of speech they are. Remind them to eliminate options by filling in more obvious answers first. Advise them that there is a distractor in the word box.</p> <p>3. Learners can work in pairs or individually to complete the text.</p> <p>DESIRABLE</p> <p>Feedback</p> <p>Ask learners to take turns to read out completed sentences from the text.</p> <p>Answers</p> <p>1 carbon-neutral; 2 clean energy; 3 carbon footprint; 4 innovations; 5 wind tower; 6 air turbulence; 7 artificial; 8 light wells</p>
<p>Workbook pages 80–81</p>	<p>Workbook: Activity 3</p> <p>1. These questions require learners to give a more critical response to the text and to think in more detail about the information it contains. They have worked through the summary and the extract, so should now have a good understanding of the material.</p> <p>DESIRABLE</p> <p>Feedback</p> <p>Ask learners to compare their answers in pairs, then ask each question for volunteers to answer.</p> <p>Answers</p> <p>1 Work started on Masdar City in 2008; 2 The designers of Masdar City were trying to stop using fossil fuels; 3 Some materials are banned from Masdar City because they damage the environment, or they can't be recycled. These could be some plastics, or paint with certain chemicals in. (OR learners' own answers); 4 The city combines new innovations in eco-friendly living with traditional ways of living in the heat of the desert; 5 Masdar City has shorter streets, like Cairo and Muscat, as the air turbulence of buildings at the end of the street lets cool air in; 6 The need for artificial light is reduced by having large windows and light wells.</p>

Resources	Plenary		
	1. Say false sentences about Masdar City to the class, for example <i>There is a 450-metre high wind tower</i> . Ask learners to provide the correct information.

Please also refer to the *Teaching Strategies* section of the *Teacher's Guide* (pages 6 to 9).

Resources	Starter
	1. Ask learners to think about the text on solar cars from Lesson 5. Ask what they can remember about how the new technology is developing. Write up key ideas on the board as a visual reference.
Resources	Main activity
Coursebook page 100	<p>Vocabulary: Activity 3</p> <ol style="list-style-type: none"> Go through the words and remind learners that these are all from the text. Ask learners to match the words to the definitions. Remind them to eliminate options by matching more obvious pairs first. Coursebook page 100	<p>Use of English: Activity 4</p> <ol style="list-style-type: none"> Read out the example question and answer. Read through the <i>Use of English</i> box with the class and check understanding of the concept – a defining clause gives essential information, and a non-defining clause gives extra information. Elicit which type of relative clause uses commas (<i>non-defining</i>). Ask learners to read the sentences, and point out that the relative pronoun they need is given in brackets each time. Learners can work individually, then check answers in pairs. <p>CORE</p> <p>Feedback</p> <p>Read out the two initial sentences and ask the class to say the combined form.</p> <p style="background-color: #d3d3d3; padding: 2px;">Answers</p> <p>1 That's my brother, whose name is Hassan; 2 He met my cousin who works in the cafe; 3 That's the train station where they filmed a movie; 4 The team from New York, whose name was Sun Racer, came third; 5 Sven Morgan, who is from Sweden, built the best car.</p>

<p>Coursebook page 100</p>	<p>Speaking: Activity 5</p> <ol style="list-style-type: none"> 1. Read the task with the class. Put learners in groups. Remind them of the Abu Dhabi Solar Challenge described in the text, and explain that there is a similar challenge in Australia every year. 2. Ask learners to find out the information listed, and anything else of interest. They should work together in groups to record their ideas. 3. If Internet access is not available in class, distribute the articles you researched ahead of the lesson. 4. Resources	Starter
Coursebook page 107	<ol style="list-style-type: none"> Write <i>zebra</i> on the board. Elicit what its distinctive feature is (<i>stripes</i>). Review the names of different wild animals and any distinctive features. Play a quick game of <i>Pictionary</i>. Start to draw a picture of an animal (giraffe) on the board. Invite the class to call out the animal as soon as they think they recognise it. Invite a few learners to come to the board and draw other animals for the class to guess. Refer learners to the opening questions and discuss them in relation to the photos. Remind them to use phrases such as: <i>I think ... Maybe ... It is hoped that this will help us find and sell (PROTECT) areas where tiger populations live. However, the difficulty is that tigers usually live and hunt in pairs (ALONE) and each tiger’s territory can be very small (ENORMOUS). One measure that is being taken is to fit tigers with satellite coats (COLLARS). These collars allow scientists to track the colour (MOVEMENTS) of the tiger so they can see the extent of their territory and then, hopefully, protect them.</i></p> <p>2. Common misconceptions for learners, ways of identifying these and techniques for addressing these misconceptions: <ul style="list-style-type: none"> • Learners can sometimes feel overwhelmed by reading texts because they believe that it is necessary to be able to understand the meaning of every single word in the text. Reassure learners that even good readers are not usually able to understand everything they read. Instead they focus on the elements that they know they need to understand in order to complete the task. Reading the questions in the task before they read is very important. Helping learners understand the purpose of <i>reading for gist</i> and <i>reading for detail</i> will also help put your learners at ease.

One or two learners are dominating: Group work is about working collaboratively, but often strong personalities end up bossing other learners around and dictating the topic, the roles and the mode of working. Everybody has the right to make a contribution so make sure this happens, otherwise there will be little discussion, making suggestions, etc. b. Only some of the group is actually working: Sometimes learners may appear to be busy, but on closer examination are actually avoiding tasks or doing nothing productive. Make sure the work to be completed is shared between group members suitably, by checking that all team members are participating fully and it is not just a few students who are doing the work for the whole group. c. Keeping to the time schedule: Time is tight on this project, so keep the groups working to time limits to complete the stages. Explain to learners that the third conditional is used to talk about situations in the past that cannot be changed, but we think about how things would be different if we could change them. For example, <i>if I had studied harder at school, I would have been accepted by a good university</i>. In this hypothetical situation, the person did not study hard, so they were not accepted by a good university.</p> <p style="background-color: #d3d3d3; padding: 2px;">Answers</p> <p>2 No; 3 No</p> <p>Differentiation activities (Support):</p> <ol style="list-style-type: none"> Do this as an open class activity to go into further detail about the meaning. <p>Differentiation activities (Stretch):</p> <ol style="list-style-type: none"> Learners write down a few lines to summarise the use and structure of third conditionals.

Track 2

Very few countries in the world provide their citizens with a really good all-round education like the UAE. Emiratis are lucky because all school-age children get free education from kindergarten all the way up to graduation from university.

In the past, it was different and there was a much higher rate of illiteracy. But as the country developed and its population grew, the country's leader and government invested large sums of money in education. Children of primary and secondary age were educated close to home, and literacy skills improved greatly around the country. However, because options for higher education in the UAE were much more limited, the state supported thousands of students who went to study abroad in foreign universities.

Now, things have changed. There are many more options now than in former times, and UAE citizens don't need to travel to another country to study for a university degree. Heavy investment in higher education at home has provided students with a much wider choice of private and public universities within the UAE.

Track 3

In the past it was different.

The state supported thousands of students.

Track 4

Mind maps are a visual way of showing how different ideas are linked together.

To create a mind map, we write the main topic in the centre of a page. Then we add branches radiating out from the topic word. We add words, phrases and ideas linked to the main idea on these branches. Then, we can add further sub-branches and add more associations with linking words and ideas. This creates a web of ideas.

One reason for using mind maps is that you can often find new connections between ideas. Some people like to use different colours for the different themes. This makes it much easier to see how different ideas are linked.

Track 5

Teacher: Hi girls, thanks for coming to chat. I was just wondering if you could help me with my survey. I'm trying to create a class profile and find out how people like to learn. Remember, we read about Howard Gardner and Multiple Intelligences

Anna: Oh yes, I remember. We did that last week.

Teacher: That's right, Anna. So what do you think? How do you like to learn?

Anna: That's easy – I really like it when teachers use lots of pictures and diagrams. Actually, it really helps when we get to see videos as well. It sort of helps link what we do in school with the outside world.

Teacher: That's an interesting point. So you're quite a visual person then, Anna?

Anna: Definitely! Sophie's the same as me – aren't you?

Sophie: Well, yeah – I do like watching videos. But, really I'm more the type of person who likes learning by doing things. You know – when we do group activities and have to make something together – like that project when we made an information poster in science.

Teacher: Was that last year?

Sophie: Yeah, we all made posters and then put them on the wall, like in a gallery, and then we walked around – looked at other groups' posters – then voted for the one we thought gave the most information – and was the most interesting.

Teacher: Sounds fun. What about you, Molly?

Molly: Oh, me? To be honest, I like working on my own. That way I can just get on and do what we have been asked to do.

Teacher: And you, Emma?

Emma: Well – I'm a bit of a mixture I think. I find it helpful when we have to work things out for ourselves. But I love things like word games – You know – that one where you have to think of a word beginning with the last letter of the last word on the board.

Teacher: We played that last week, didn't we? A lot of people seemed to like that one. Anyway, I think that just leaves you, Lucy. How do you like to learn new things?

Lucy: Umm ... one of the things I find really helpful when I am learning something new is lots of repetition – and activities that keep testing your memory. Things like chants are fun and I liked that disappearing text we did – you remember – when the teacher wrote a paragraph on the white board and we had to read out what we could see – then she started rubbing off words and we had to read it again and remember what words went in the gaps. Until there were no words left on the board. I was really good at that!!!

Teacher: That's great girls. That's really helpful. Better let you go though. Morning break is nearly over now and you'd better get to your next lesson. See you tomorrow!

Track 6

Hamad: Well, I think online courses are great. Basically, you can work when you want and where you want. OK, you still have to finish your work at a certain time, but if you want to work all night you can. I like interactive

courses where you can watch videos and share your ideas with other learners. What do you think, Fares?

Fares: Yeah, I agree, Hamad. Distance learning is great because you don't have to spend time travelling. I mean, you can study anywhere and that's got to be a great thing.

Eisa: Actually, I don't think e-learning is as good as traditional learning. You're right, it can save you time, but it isn't right for everyone. Some learners might prefer having a teacher there to explain things to them. What do you think, Abdullah?

Abdullah: Yeah, you're right, Eisa, and also, you need to have good IT skills. If you don't have good IT skills, you can spend a lot of time installing software and trying to use it. So, it doesn't always save time. It can actually waste time. I don't have good IT skills. Installing new software is one of the worst things for me. How about you, Hamad?

Hamad: But you don't always need software. I mean, you can watch videos or take part in a webinar and you don't need software for that. Webinars are one of the most interesting ways of learning. It's just like being in a lesson, but you can watch them anywhere. What do you think, Fares?

Fares: Webinars are great but I think WebQuests are one of the best ways of learning, because you combine e-learning with traditional learning. I really enjoy doing research on the Internet, and then working with a group of learners to complete the task. That's the best way for me.

Oscar: Hi, Harry.

Harry: Hi, Oscar.

Oscar: Have you thought about your future learning goals?

Harry: No. Have you? I'm not sure what I want to do yet.

Oscar: Hmm ... When I finish school, I think I'd really like to go out to work.

Harry: So ... why don't you, Oscar?

Oscar: Well ... my parents and the teachers want me to go to university. They say I have the ability to study for a good profession.

Harry: What ... like a doctor or lawyer?

Oscar: Guess so. What about you, Harry? What would you like to do?

Harry: Well, Oscar, ... first I want to finish school and get these exams out of the way. I want to do well in those ... so one of my first learning goals is to draw up a revision timetable for every subject. Then I'm going to do lots of exam practice. Then I'll see how I get on. If I get good grades, I will probably apply for university. My parents would like me to, like your parents.

Oscar: To be honest, Harry, I'd really like to take a year off to think about what to do. Maybe my goal will be to get a job for a year and save up some money! Then when I go to university, I'll be able to run a car and eat out in expensive restaurants! But, that's more of a future life goal than learning goal, I guess!

Track 10

When I finish high school, I will apply to universities to do a Business degree. If I study as a distance learner, I will live at home and I can do my course online which means

I can get a part-time job and I won't have to study on campus. I would like to interact and work with other students at university, but it is more important that I am close to my family. My immediate goals are to develop my e-learning skills, as most university degrees these days require students to be computer literate. This means you should have a general knowledge of software and various computer applications. I also need to do a MOOC which means 'massive open online course' and register for some webinars, both of which will show that I am an experienced online learner and I am capable of taking on a distance learning degree.

Khalid: Hi Grandad, how are you?

Grandad: Very well thank you, Khalid, and you?

Khalid: Tell me about your old house, Grandad.

Grandad: Well, we lived by the beach in Jumeirah, but we had to move when the development started. Things were very different then. Both of my sisters got married and moved to homes of their own, but I was younger, so I stayed at home with my parents for longer. Then when I got married, my wife – your grandmother – moved in to our family home.

Khalid: That must have been nice.

Grandad: Yes, we were very happy. There were always lots of people coming to visit: cousins, my sisters and their husbands. It was fun, we were a very close-knit family. There were always lots of people at mealtimes.

Khalid: So did you live there with Dad, when he was born?

Grandad: Yes, your dad lived in the family home too. It was sad when we moved, but things are different now. Later, both of my children – your dad and your aunt – moved to the city for work. It was quiet when it was just me and your grandma at home!

Khalid: It isn't quiet now!

Grandad: No, it isn't! Now we live with you, the house is full again!

Ali: So, when did you arrive in the UAE, Daniel?

Daniel: In the last week of November. I've been here for about two and a half months. I love it. Dubai is an extremely interesting place to be. I'm doing a college exchange so that I can improve my Arabic.

Ali: Yes, it's a really fantastic place.

Ali: Yes, it's a really fantastic place. I guess you saw the recent National Day celebrations. We love celebrations here.

Daniel: Yes, I saw the parade. What other things do Emiratis celebrate?

Ali: Well, lots of things. Weddings – as you can probably imagine – are times when we have really big family celebrations. Then, of course, when anyone graduates from college or university, families will always want to do something quite special. Oh, and if there's a new

baby in the family... well, that's another reason to have a party or some sort of celebration.

Daniel: That's quite similar to my country. Are there any other things that families celebrate – like national events or holidays?

Ali: Well, we have quite a lot of holidays I suppose, but my favourite is Eid Al-Fitr.

Daniel: Oh, what happens then?

Ali: Well, Eid Al-Fitr marks the end of Ramadan, which is the month when we fast. I mean when we don't eat or drink anything during the hours of daylight.

Daniel: Oh, I see.

Ali: And then at Eid we celebrate! Last year, my uncles and aunties came over from Abu Dhabi. My mum and my aunties made lots of festive food and we all celebrated together. It's a time to be with family, to visit relatives and give money to children. There are lots of community events you can go to too, with special activities for kids.

Daniel: It sounds great, Ali. I'd really like to be here for Eid, but I'm going back to the States next month. But maybe on another trip!

Interviewer: Hello! Today I'm in a place in sunny California which I'm sure many of you have heard of. Here's one of its residents, Paul Taylor. Paul, what can you tell me about Silicon Valley?

Paul: Hi, it's great to talk to you today! Well, where do I start? Silicon Valley is in San Francisco, California, and it's home to some of the largest technology companies in the world. Google, Apple and Facebook are all based here, as well as hundreds of other leading high-tech companies.

Interviewer: I'm sorry, did you say Google, Apple and Facebook are all here?

Paul: Yes, that's right. It really is the centre of the world's technology industry. And it's not just big companies – there are more start-up companies in this area of San Francisco than anywhere else in the world. The latest hardware and software necessary to underpin and power their businesses is all developed right here, in Silicon Valley.

Interviewer: The area has grown so quickly over recent years – is it over now?

Paul: No, it certainly isn't. Google has plans to develop new headquarters over the next few years. I think this is a fantastic project, as the buildings will be some of the most modern and innovative in the world.

Interviewer: So, would you say this is just a large business park?

Paul: No, not at all. This isn't just a centre for industry. There are world-famous institutes here, such as the Computer History Museum and a NASA Research Centre. For me, the most exciting is the Tech Museum of Innovation.

Interviewer: The Tech Museum of Innovation? Can you tell me more about that?

Paul: It's where the newest technologies and designs are showcased, from robotics to gene therapy to alternative energy and conservation. It's designed to be interactive, so visitors can explore the exhibits and imagine what our world might look like in the future.

Interviewer: That sounds great – I'd love to visit! Paul, what would you say are the leading areas of research and development at the moment?

Paul: A few years ago, it was nanotechnology – the science of making smaller devices. Now, it's artificial intelligence or AI. This is the ability to develop computer systems which can learn how to do tasks usually done by humans.

Interviewer: So, what you're saying is that robots will soon be acting like humans?

Paul: Well, not quite! But there is a lot of work in this area at the moment. In my opinion, this is the one thing that will really change our future. It's big business in Silicon Valley, and lots of companies are involved in the race to create the best new AI systems.

Is space technology going to be the next most important industry in the UAE? In 2009, the UAE launched its first UAE owned satellite, and since then the space industry has grown quickly. In 2014, the UAE Space Agency was established to develop space science and space technology as an industry.

The UAE Space Agency's most important goal is to send a mission to Mars. Mars is often called the Red Planet because it is a red-brown colour. It has two moons and is the second smallest planet in our solar system. It is the planet most similar to Earth and, like Earth, it has four seasons. We can learn a lot from Mars that might help us on Earth.

The launch of the Mars Mission is scheduled for 2020. If successful, the mission will travel more than 60 million kilometres and take one year to reach Mars. There won't be astronauts on the mission. Instead, they will send a probe, which is a mechanical device, to land on the surface of Mars. This is the first space programme by an Arab country.

Track 20

Ahmed: Hi, Rashid. I've been reading about the UAE Space Programme on the Internet. There is going to be a mission to Mars in 2020. Mars is quite similar to the Earth and by studying Mars we might be able to predict what will happen to the Earth in the future. That's really exciting. Would you like a career in space technology?

Rashid: Hi, Ahmed. Yes, I'd love a career in space technology. I think it would be really interesting to be a space engineer or a space scientist. Maybe one day I could work at the Mohammed bin Rashid Space Centre and help with the Emirates Mars Mission. That would be amazing.

Ahmed: Or you could be an astronaut, Rashid, and work on the International Space Station. Would you like to travel into space?

Rashid: Absolutely. I'd love to be an astronaut and go on a mission into space. I think it would be really exciting.

Ahmed: Yes, me too. I would definitely go into space. I've been watching videos of the British astronaut Tim Peake and the other astronauts in the International Space Station.

Rashid: But Ahmed, you don't have to be an astronaut to go into space, do you? You could be a space tourist. There are companies like Virgin Galactic where you can pay to travel into space. It costs thousands of dollars, of course.

Ahmed: Well, I'm not sure. I don't think space tourism is useful and it probably causes a lot of extra pollution.

Rashid: Yes, you're right. I think it's better to be part of a proper research mission than a tourist mission. In short, I think space technology is really exciting. I'd love a career as a space scientist because it would be really interesting and it's an important science. But I don't think space tourism is a good idea.

Ahmed: I agree with you.

Male 1: The use of drones can be controversial. Often criticised for being able to look into private places, the *Drones for Good* initiative, makes a good case for using drones as our technology correspondent explains.

Male 2: Yes. It's true that, for many people, the increase in the number of drones used both by the public and by official bodies is quite worrying. People see them as an intrusion into their lives. But we want to make it clear, that in order to use any drone, there are very strict regulations in place that protect everybody from unwanted filming!

This fear may be also based on the increased popularity of drones over the last couple of years. From hardly seeing any drones two years ago, now they seem to be everywhere!

Where they have become particularly popular are in the fields of education and science. Let's take a look at what's happening in education first.

Drones are quite small and reasonably cheap. And, they are much more easily available and popular than before. So, many educationalists see this new craze as a possible way to attract students into the areas of science and technology – subjects that they have had difficulty attracting students into. As part of this initiative, new courses are being created. Some of these courses look at the practical side and focus on how to make drones; others look at how drone technology can be integrated into the course content.

In science, drones are being used in research to help prevent the spread of disease. How this works is based on the fact that drones can get to places that are otherwise inaccessible to the rest of us – maybe because the terrain is too dangerous or the area is too big to cover easily by other means. So, when it comes to tracking populations of flying insects that are the carriers of disease, the challenge is even greater! So drones can be crucial components to the success of such a project. Let's take the tsetse fly in Africa, for instance. This insect is known as the carrier of a parasite that produces sleeping sickness in both humans and livestock. By using drones to survey the land, they can drop sterilised male tsetse flies into areas where there are wild populations. As a result, scientists hope to see the number of the insect in the wild drop with the long-term aim of eradicating the disease.

Speaker: Dhows are traditional Arabian boats. There are a number of different styles, but their key features are two masts and triangular sails, called *lateens*. These let the boats travel faster when they are sailing against

the wind. Modern commercial boats now have engines, whereas dhows for racing still use sails.

Boat building is important in the UAE, as it is part of a long tradition. In the past, the people of the Arabian Peninsula were the most advanced seafarers in the world. They used innovative techniques, and had instruments to help them navigate the seas. They traded with many other countries, such as India and Sri Lanka.

There are some dhow-building boatyards around the UAE, in Dubai and Abu Dhabi for example, which build boats in the same way it's been done for generations, using traditional materials and tools. The outer shell of the boat is constructed from planks first. This is different to the European technique, where the frame of ribs is constructed first, so that the planks can be attached to it. Until around 70 years ago, the planks which make up the hull were stitched together using coconut rope, although thin nails are used now. The holes for the nails are drilled by hand, so the wood doesn't split. The work is managed by a highly skilled master craftsman, and the boat builders work without using plans, since they have so much experience.

In the past, dhows were used for fishing and for transporting goods in national and international trade. They are still used for carrying everything from washing machines to foodstuffs to tyres around the Gulf. They are a useful and inexpensive way to transport goods up and down the Gulf.

The tourist industry is finding new uses for the boats. Many dhows are used for floating restaurants and luxury river cruises which travel up and down Dubai Creek. These have traditional food and on-board entertainment. If you walk along the port, you will see many of these dhows competing for custom.

There are also dhow races, such as the Al Ghaffal Traditional 60 foot Dhow Race. This is an important event, since it helps us remember the young pearl divers and fishermen who were so important in the early development of the Emirate. This can feature up to 100 boats, and many people gather to watch it.

Interviewer: Good afternoon everyone and welcome. On 'Culture Today' we're discussing traditional Emirati embroidery and the challenges this valuable cultural tradition is facing in a technological world. And welcome Professor Deema Ahmed Al Qasimi. Thank you for coming on today's show.

Professor: It's a pleasure to be here.

Interviewer: The Emirates has a rich cultural heritage, doesn't it Professor Al Qasimi? Perhaps one of its oldest traditional crafts is embroidery and knitting.

Professor: Yes, that's right. Embroidery has been a part of Emirati culture for many, many generations. It is a skill that was traditionally taught by mothers to their daughters. And one of the most well-known forms of embroidery is 'talli'.

Interviewer: This is the name given to a type of embroidery that is used to decorate the *abaya*, which is the traditional dress worn by Emirati women.

Professor: Yes, that's right. There is also the delicate gold embroidery which is sewn into the *bisht*, the garment worn by men over the thobe on special occasions.

Interviewer: What are the designs like?

Professor: Well, the designs are made using very fine gold and silver threads. Traditionally, *talli* is made on a small stand called a 'kujoojeh'. The women who make it cross the threads in different ways. They keep crossing the threads in different combinations to weave very beautiful patterns. The women are highly-skilled and it can take years to learn this ancient craft.

Interviewer: But that's the problem, isn't it Prof Al Qasimi? Modern fashions today are found in every mall and online retailer. Young women don't need to learn embroidery because they can buy clothes with beautiful embroidery anywhere. Fewer young women are learning how to do *talli*, and this important Emirati cultural tradition may soon be forgotten.

Professor: Yes, that's true. The craft of traditional embroidery is in danger and we want to avoid losing it completely. Fortunately, there have been exhibitions and workshops at centres like the Sharjah Institute of Heritage in recent years. These exhibitions are helping to educate the younger generation about their cultural heritage, and to keep the tradition alive. So we haven't

lost the skill yet and if we keep talking about it, it may continue long into the future.

Interviewer: Absolutely, Prof Al Qasimi. Thank you very much for coming on the show today and talking with us. Now,

Hessa: Hi Alia, oh I see you haven't finished writing up your project. Which topic on Culture and Tradition have you been researching this term?

Alia: Well, I've been sewing since I was about seven years old, so I've been researching Emirati embroidery this term. What about you, Hessa, which topic have you been doing for your project this term?

Hessa: I've been looking at lessons one and two. My father has been building dhows since his first job, so I've been researching boat building with him at his work. How long have you been writing up your project?

Alia: Oh, for the last two days; it's taking so long and the teacher has been asking me all week if I've finished it. It was due in a week ago.

Hessa: Oh dear, why don't you ask our classmates if anyone has been working on the same Culture and Tradition topic as you? Perhaps they can help you.

Alia: Thanks that's a good idea.

Anna: Hi Kate, what are you doing?

Kate: I'm having some time out, Anna! I've had a very busy day.

Anna: What's that smell?

Kate: Oh, that's lavender oil. Aromatherapy is a great way to relax. I've put lavender oil in an oil burner.

Anna: Oh, ok. Doesn't it just make you tired?

Kate: Well, yes – but that is relaxing!

Anna: I don't feel relaxed if I sit still. I'd rather go for a run or go out on my bike. That's my kind of relaxation.

Kate: Hmm, I know what you mean, but you have to get into your running clothes, then you get hot, and you have to get changed again – as far as running is concerned, I think there's just too much to do!

Anna: Yes, but at least you get fit. I don't see how lying down in a dark room can make you feel better.

Kate: Well, for a start, for most of the day I've been at college and in the library, reading and learning. Lying down in here gives me a bit of downtime, to let me clear my head. I'm trying visualisation as well.

Anna: Visualisation – what's that?

Kate: Well, although it may look like I'm staring at the wall, I'm actually imagining a beautiful beach. If I keep thinking about it, I can imagine I'm there. It's a really good way to relax.

Anna: I don't think I could just think about one thing for so long. I'd start thinking about other things – like when I'm going to the gym next. Anyway, why are you so stressed about college? You're doing really well.

Kate: Oh, I've got exams soon, so I know I'll have to do lots of work. I really need to get good grades, so there's a lot of pressure. I'm feeling really anxious all the time.

Anna: That's a shame. Do you want to try one of my herbal teas? If you like things like aromatherapy, you might like this. It's got lots of different flowers and herbs – camomile and lavender, that make you feel calm.

Kate: Wow, thanks, Anna. That does sound good. I'll try that.

Anna: And maybe you could do the triathlon with me next week. There'll be running, swimming and cycling – you'll love it!

Kate: Er, no – that doesn't sound like fun to me!

Speaker: A night's sleep is made up of four or five short sleep cycles. Each sleep cycle lasts for between one and one and a half hours. Each sleep cycle is made up of five stages of sleep: Stages 1, 2, 3 and 4 are non-REM sleep and the final stage is REM sleep.

Track 31

Speaker: Research shows that sleep is as important for health as exercise and diet. If we don't get enough sleep, we become tired, unhappy and ill.

We spend a third of our lives asleep. Sleep is made up of five sleep cycles. During each sleep cycle, there are different sleep stages when we enter REM sleep or non-REM sleep. REM is short for *rapid eye movement*.

In stage 1, we enter a light sleep and can wake up easily. We only spend 5 to 10 minutes in this stage.

In stage 2, we sleep more deeply and this is where we spend most of our sleeping time.

In stages 3 and 4 we enter deep sleep. During these stages, brain activity decreases and blood flows to the muscles. The body starts to repair itself. We may spend 20 to 30 per cent of time in this stage.

These four stages are non-REM sleep and is when our brain is least active.

The fifth stage of sleep is REM sleep. REM sleep is when our brain is most active and our eyes start to move rapidly. It is when we dream, which is our brain's way of processing the information it has received during the day.

Both REM and non-REM sleep are necessary for good health. One reason why children have a lot of dreams is that they spend up to 50 per cent of their sleep cycle in REM sleep. Working during the night or sleeping during the day can upset the body's rhythm and may lead to sleep disorders such as insomnia. Having a sleep disorder, may stop us experiencing deep sleep (stages 3 and 4) and REM sleep (stage 5), and this is not good for our health.

Research shows that the quality of sleep is more important than the quantity of sleep. If we are disturbed during very deep sleep in stage 4, it can be difficult for us to wake up and we feel confused. That's the reason why some people don't use an alarm clock at the weekend. The best time to wake up is during light sleep in stage 1. Now there are phone apps that can monitor brain activity during sleep and wake us up in stage 1, to make waking up easier.

Masdar City is a city of the future. It's situated in the desert, 17 kilometres from Abu Dhabi. Work started on Masdar City in 2008. The plan was for the city to cover six square kilometres. The first six buildings were completed and occupied by 2010. The city was designed to be one of the world's first carbon-neutral urban developments, powered by clean energy. Even during the construction of the city, efforts were made to have as small a carbon footprint as possible.

From the start, its goal was very clear – to set the world standard for sustainable development and a modern eco-friendly way of life, to educate people about renewable energy and to break away from the use of fossil fuels.

Waste in the city is reduced as much as possible – people are encouraged to reduce and recycle, and some materials are banned from the city.

The streets and buildings were designed with practical, comfortable environments in mind. The designers combined the latest innovations and materials with traditional knowledge of how to manage the heat of the desert to reduce the need for air conditioning and heating. The streets are cooled by a 45-metre-high wind tower, which draws air down to bring in a cool breeze. This is based on a traditional Arabian design. The buildings are close together to create natural shade in the streets. Following the models of places such as Cairo and Muscat, the streets are also shorter. The buildings at the end of each street cause air turbulence, which pushes hot air upwards and allows cooler air in.

The need for artificial light is reduced by the use of large windows and light wells in the roofs, which make more use of natural light.

The city is fully pedestrianised, with no vehicles on the streets, and there's an underground transport network.

At the city's university – the Masdar Institute of Science and Technology – students lead the way in research into and development of sustainable living. Three hundred students live and study here. The work done at Masdar has allowed people to learn about the challenges of creating an eco-friendly city, and to transfer that knowledge to new building and planning projects across the UAE.

Track 34

A: I've just read a really interesting article about Rashed Al Nuaimi. Do you know about his work? He ...

B: Yes, I do! Oh, sorry ...

A: Sorry, I was just going to say, he's done so much to raise awareness about environmental issues and sustainability, hasn't he?

B: Yes, he has. He encourages an eco-friendly way of life, and he follows the same lifestyle himself. I think that's really important.

A: So do I. He's a very inspiring man.

Water is the most valuable resource in the world today. Seventy per cent of the Earth is covered by water but only two per cent of that is fresh water. Although the UAE is mostly a desert country with little rainfall, it is one of the highest water users in the world. Each person uses an average daily amount of 400 to 550 litres, compared to the world average of 170 to 300 litres. Middle Eastern countries have little fresh water and depend almost totally on the desalination of sea water.

Track 36

Water is the most valuable resource in the world today. Seventy per cent of the Earth is covered by water but only two per cent of that is fresh water. Although the UAE is mostly a desert country with little rainfall, it is one of the highest water users in the world. Each person uses an average daily amount of 400 to 550 litres, compared to the world average of 170 to 300 litres. Middle Eastern countries have little fresh water and depend almost totally on the desalination of sea water.

Desalination is the method that removes salt and other minerals from sea water so that it can be used for drinking or irrigation. There are over 15,000 desalination plants around the world, and the biggest are generally in the UAE and Saudi Arabia. The first desalination plant was built in Abu Dhabi in the 1960s by a Scottish engineering company. Since then, about 80 per cent of all drinking water in the UAE is produced from sea water using desalination methods.

The most common method of desalination is reverse osmosis, which uses pressure to take out the salt. However, this method has some disadvantages. It uses a lot of power and creates high carbon emissions, so unfortunately, it contributes to global warming. It also causes environmental damage by increasing salt levels in the sea. This can destroy marine life. And finally, it is expensive. Another method involves heat evaporation but this method uses up to five times more power than reverse osmosis. However, there are some desalination plants in the UAE which run on solar power. This method is much cheaper to operate and doesn't produce carbon emissions, so it's much cleaner. The

result is water that is cheaper to buy and better for the environment.

The rising population in the UAE means that the demand for water is increasing all the time. It is thought that the demand for water in Abu Dhabi will increase to about 5,000 million litres per day by 2030. Today, people are encouraged to use water more efficiently at home, school and in business. Scientists and engineers are working to create more efficient water systems and water-saving devices, that will help conserve water supplies. Working towards a sustainable water supply is the challenge facing the UAE now and in the future.

- 5 We should think of ways to save water. Maybe we could wash the car less often?
- 6 Actually we need to create more water-saving devices as soon as possible.

Track 39

Tigers are one of the most well-known animals in the world. They have existed for over two million years and still live in large areas of South-East Asia. However, over the last one hundred years, the tiger population has decreased dramatically from around 100,000 tigers at the beginning of 1900 to around 4,000 today.

The main reason for this decline is loss of habitat. Tigers' natural habitat ranges from tropical rainforests and mangrove swamps to woodland and grassland. Both male and female tigers normally live alone and mark out their territory to define their hunting grounds.

Unfortunately, over the past century, enormous areas of this habitat have been developed by man, pushing the tigers and their prey into much smaller areas. Huge areas of rainforest have been cleared for timber and for the building of roads and farms.

As areas of forest are cut down, the tigers' traditional hunting grounds are lost. This forces them to look for food closer to human communities. As a result, domestic livestock are sometimes killed as a substitute for the tigers' natural prey, which causes conflict between humans and tigers.

Unit 7

Track 40

Good afternoon and welcome to this presentation on what it means to be a good citizen.

First, let me ask you a question. What do you do to help other people? How do you make the world you live in a nicer place? To build a better society, everyone needs to be a good citizen.

Think about rules and laws. Laws are set up to keep people safe, and to make daily life run well. When people break laws, they affect other people's lives and make them difficult or dangerous. You should always respect the rights and property of other people. Essentially, this means, you should treat other people the way you would like to be treated. If you borrow your friend's school books, return them in a good condition. If someone is talking, listen to them.

Of course, it is clear that you should be an honest and trustworthy person, but nobody can be perfect all the time. If you do something wrong, don't be afraid to take responsibility for your actions. This may seem scary, but it is the right thing to do, and you will learn from your mistakes.

This is all standard good behaviour, but to really make a difference to society, we must ask ourselves what we can do to help other people who cannot help themselves. Can we volunteer to be active in our community? Can we help someone by giving our time or experience? Think about your neighbours, and ask yourself if there is anything you can do to help them.

Of course, we can act in a socially responsible way, but we also need to think about the physical world we live in. Protect the environment – this makes the world a pleasant place for everyone. This includes everything from not dropping litter to trying to reduce the amount of waste at home, and using green transport solutions when we can.

Finally, we should do our best to keep informed about the world around us. Don't ignore the larger world – educate yourselves about it, learn about other people and different ways of life.

Now, does anyone have any questions?

A charity is an organisation that helps people who need money or support in difficult times. There are many different types of charities. Some charities help people in times of war, famine or environmental disaster.

Other charities support research into illnesses, or raise money to build hospitals and health care centres.

Oxfam is a world-famous charity that was set up in Oxford, England, in 1942. Today, Oxfam works in many different countries around the world and helps thousands of people. It relies on volunteers – who work for free – and people who donate money to its many projects. Oxfam helps people in local communities fight poverty, cruelty and the causes of famine. As you can see from this slide, Oxfam has grown into one of the biggest international organisations in the world.

But charities don't have to be huge, international organisations. There are thousands of small charities all over the world that work to help people in local communities. Now, if we look at this slide, we'll see the work of a local charity in Dubai called Riding for the Disabled Dubai. Riding helps disabled children and adults in many different ways. It improves health and strength, and it increases confidence. In 1998, her Highness Sheikhha Hassa bint Mohammed bin Rashid Al Maktoum donated three horses to Riding for the Disabled Dubai. Since then, the charity has grown in size, and it now has nine horses and helps around 70 children and adults every week. The centre has a team of permanent staff who run the charity and train the

horses, and there is also a team of volunteers. So far, there have always been plenty of local volunteers who donate time and experience to help the charity and local businesses who donate money. This shows how much ordinary people want to help people in their community. But more volunteers are always needed. We must all help our local communities and support local charities when we can.

Track 45

Interviewer: Hello Mohammad, can you tell me what being a global citizen means to you?

Mohammad: Yes, of course. Global citizenship is a process which involves understanding that we live in one world and everyone is connected.

Interviewer: And how exactly are we connected?

Mohammad: Well, everything an individual does has an impact on others. For example, if we choose to drive less we could reduce our contribution to carbon emissions which are bad for the environment. The environment does not have borders, so if we pollute our surrounding areas this has an impact on others.

Interviewer: I see. So what other things make us a global citizen?

Mohammad: The term being a global citizen makes people think about world peace, addressing world famine and protecting the world's environment. Of course, doing something about these issues means that you are a global citizen but these issues will never be solved if individual people don't help on a local level.

Interviewer: And how are we supposed to do this?

Mohammad: Well, I have been working with physically challenged young people to ensure that they have an education that is equal to others, this I would say is the local level. On a global level, I tell people about what I do, which raises awareness of the needs of these young people.

Interviewer: Okay, but how does this impact the world?

Mohammad: The point is, by sharing their stories, I can influence policy makers which may have an impact on other communities and countries. I use social media to connect and communicate with people throughout the world and when they hear about how we care and support young people, these practices may be adopted in other places. So, to sum up, there are different levels of citizenship. You can be a local citizen who helps in the community but, if you want to be a true global citizen, you need to also consider how your actions can help or care for the whole the world and the people living in it.

Interviewer: I see what you mean by being connected. Thank you, Mohammad.

Speaker: Halima Al Marri is the founder of the fashion store, *Career Lady*, which opened in 2010. Her other fashion industry successes include fashion shows in Paris, and selling her clothes online. We sat down with the entrepreneur to talk about her plans and her businesswomen clients. What was the original idea behind *Career Lady* and how has it changed over the years?

Track 47

Speaker 1: Halima Al Marri is the founder of the fashion store, *Career Lady*, which opened in 2010. Her other fashion industry successes include fashion shows in Paris, and selling her clothes online. We sat down with the entrepreneur to talk about her plans and her businesswomen clients.

What was the original idea behind *Career Lady* and how has it changed over the years?

Speaker 2: I decided to open *Career Lady* because there were **too few** stores offering clothes that were suitable for me as a businesswoman from the Gulf. When we started *Career Lady*, which was a very small boutique, we had few brands and we were **interested** in the **story** of each brand, each piece, and the designers themselves.

We were really **passionate** about it. Since everyone in the company was really young, we weren't thinking about it from a business perspective. At the time, we couldn't have imagined what was going to happen. People followed us from the beginning because they saw *Career Lady* as a boutique that was **excited**—not just **exciting**. Even though the store was small, because of the way we worked, we were very successful from the beginning.

Speaker 1: What makes *Career Lady* different from other boutiques?

Speaker 2: The clothes we sell are high-end designs for businesswomen. Our goal is to have **every** piece in the store be **really special**. Our clothes are as special as the women who wear them.

Speaker 1: Can you tell me more about the businesswoman from the Gulf?

Speaker 2: She is educated and elegant. She's highly professional and always looks smart, so she must be up to date with the latest businesswear. A businesswoman from the gulf goes to important meetings. She goes to dinners. She's always busy and doesn't wear what everyone else wears because she's not like all the others. She's **special!**

Track 48

Speaker: ... there were **too few** stores ...; We were really **passionate** about it.

Track 49

Speaker 1: Good morning Areej and thank you for taking time out of your busy schedule to come into our studio.

Speaker 2: Thank you for having me!

Speaker 1: Well, Areej, I'm sure you know that today is World Teachers' Day. We wanted to take this chance to ask you some questions so our listeners can find out about this, sometimes underestimated, job. So, I'll start off by giving you a quick introduction. Areej is an English teacher for grades 4, 5 and 6 in a school in Ajman. Now, my first question, why did you decide to become a teacher?

Speaker 2: Well Lisa, ever since I was young I have enjoyed teaching. I remember when I was around 8 years old I used to make a classroom at home by putting my 1 year old sister behind my desk and teaching her maths and writing! It was so funny because for some reason I always acted very serious and strict while teaching. My parents have it recorded on camera.

Speaker 1: I hope you're not as strict now!

Speaker 2: No, it's very different now. So yes, then throughout school and university I somehow always ended up tutoring one of my classmates and offering them study support after school. I just enjoyed it so much and I felt confident enough to help others to understand different ideas.

Speaker 1: So, why did you choose to teach primary students? Why not high school or even university level? Is it easier or less work?

Speaker 2: I don't necessarily think it's easier. Every job has its own pros and cons. I think I was always interested in teaching younger children because of how innocent they are. It's almost as if they're seeing everything for the first time. I love the moment my students finish writing a story or giving a short presentation: you can see how happy and proud they are, in their eyes and body language. It's a very rewarding feeling.

Speaker 1: Well, this makes it easy to move on to my next question. Do you like your job?

Speaker 2: Again, every job has its advantages and disadvantages, but if I were to look at the bigger picture then YES, I LOVE my job! Sure, there's a lot of work to do after school; writing lesson plans and marking homework. You also sometimes get a really difficult timetable where you teach long hours. But in the end, it's all worth it to see the children advance and become better at expressing themselves.

Speaker 1: So could you describe a typical day in your job?

Speaker 2: Ok, well I'm sure you know that teachers have to wake up very early. So I start my day at 6am, get ready and have a big breakfast to give me energy for the day. I start teaching at 7:30am and teach between 2 and 3 classes before break. That's usually the time I like to have my daily coffee and just relax reading my favourite magazine. I then go back to classes until around 12:30; that's usually the time most language teachers like myself gather and have our daily meetings. At 2pm I head home, have lunch with my family, have a short rest then work on writing or adjusting daily lesson plans for the following day.

Speaker 1: Wow, you also work at home?

Speaker 2: Yes, that's one of the disadvantages of being a teacher. You often have to bring a lot of work home. Many teachers spend time either weekly or every other week, marking homework or checking quizzes.

Speaker 1: A lot of work I imagine! So, can you give any advice to the young people listening about becoming a teacher?

Speaker 2: It doesn't matter what job you end up doing as long as it's something that helps others and it's something you truly enjoy! If you love your job, you'll enjoy it and be so much better at it!

Track 50

Speaker 1: Good morning Packham's Employment Agency. Can I help you?

Speaker 2: Oh yes, I'm ringing to ask about finding a job for the summer.

Speaker 1: Yes, of course. First of all, I need a few details from you.

Speaker 2: That's fine.

Speaker 1: Can I take your name?

Speaker 2: It's Jassim Mkere.

Speaker 1: Can you spell your surname, please?

Speaker 2: Yes, it's M-K-E-R-E.

Speaker 1: Is that m for mother?

Speaker 2: Yes, that's right.

Speaker 1: Thank you, and can I have your address?

Speaker 2: It's Westall College.

Speaker 1: Is that W-E-S-T-A-L-L?

Speaker 2: Yes, ... college.

Speaker 1: Westall College. And where's that?

Speaker 2: It's 4 Downlands Road, in Bristol.

Speaker 1: Oh yes, I know it. And the postcode?

Speaker 2: It's BS8 9PU.

Speaker 1: Right ... and I need to know your age.

Speaker 2: I was born on 2 December 1996.

Speaker 1: Thank you. Now can you tell me about your past work experience?

Speaker 2: Yes, well, I worked in my father's travel agency last year.

Speaker 1: OK. Can you tell me what you did exactly?

Speaker 2: Yes, well, I answered the telephone.

Speaker 1: OK. Good. Um ... anything else?

Speaker 2: Yes, I also wrote emails to our clients.

Speaker 1: OK and when would you be available to work?

Speaker 2: Well, I study during weekdays so I'm only free at the weekend.

Speaker 1: That's fine. Now, the last thing I need to know is how we can contact you.

Speaker 2: Well, there's my mobile number 0508725213 or you can email me on jassimm@yahoo.com

Speaker 1: That's all I need for now. We'll be in touch as soon as we have something for you. Thank you for calling. Goodbye.

Speaker 2: Thank you for your help. Bye.

Track 51

Speaker: All of you must be very excited and nervous about starting your long medical journey. I was asked to come and give you this talk to help you see what it is like being a doctor. Most of you are going into medicine committed to helping people in need and with a feeling of pride in the abilities you will gain in order to diagnose and treat patients.

You will spend a lot of time over, at least, the next 6 years learning about the human body and developing your skills in researching and analysing symptoms. Being a doctor can be rewarding. When you become a doctor, there will be days when you go to sleep at night feeling satisfied with your achievements. But, being a doctor can also be very tiring. There will be sleepless nights filled with deep thought and feelings of huge responsibility. Being a doctor can also be very stressful.

When you're a doctor, you are always working. Even when you are on vacation, and not in your clinic or hospital, you will carry the responsibility of using your knowledge and experience to help others. Being a doctor can be very demanding.

Enjoy your journey and make the most of your career, and always remember the principal goal of being a doctor; to help people.

Track 52

Speaker: There are different steps you need to take when creating your career plan. During the process you will probably have to go back and forth to steps since this plan needs to be updated with time.

The first step you need to take is to research the career or job you hope to get. By research, I mean to look at every detail about the job. Start by thinking about comfort. Will this job be very tiring, or will it have a balanced nature? Read online, ask friends who work in the field and look for any information you can find. Job advertisements will not announce the negative side of a job; this is for you to find out. You also need to look at salary and income. Will this job pay well? And, more importantly, will this pay increase over time? Life will change, your responsibilities in life will increase and with that your salary needs to increase too. Finally, research any extra qualifications needed. Look at the basic qualifications you need for the job, do you have them? If you do, then move onto the extra and recommended qualifications. Having these will give you an advantage over other applicants and give you a strong start in the career you're aiming for.

Track 53

One

Speaker: When you are stressed at work you need to have optimism and a positive attitude to continue your job.

Two

Speaker: Ahmad found the transition from the marketing to the advertising field challenging.

Three

Speaker: The public and private sectors have different rules for employment.

Four

Speaker: I'm going to attend the entrepreneurs' forum in London this year; over 1,000 people are going to attend!

Five

Speaker: Never choose a vocation just because you can make a lot of money; you might not enjoy it.

UNIT 9

Track 54

Speaker 1: Sally, it's a pleasure to have you on our show today.

Speaker 2: Thank you and I'd like to thank you for the opportunity to be interviewed by your sports show, which I'm a big fan of!

Speaker 1: Sally is an international weightlifter who is now world-famous. She has made everyone proud by being the first female weightlifter in her country to compete internationally. She is a role model for many girls around the world. She won several medals during the early stages of her sports career. Her story shows the true ability of women and their dedication to reaching their goals. So, Sally, first of all, tell us how this all started.

Speaker 2: Okay, what brought me to weightlifting was my decision a few years ago to fight my unhealthy habits. I started my journey by just going to the gym part-time, and trying all different kinds of workouts from bodybuilding to sprinting. Anyway, one day, in 2011, I saw an Ad about something called 'crossfit'. I tried it and I loved the competitive aspect of crossfit, so I continued. A year later, I competed in a regional competition as part of a team. After the regionals, I had to make a decision; I had a passion for Olympic weightlifting and wanted to aim higher, but my technique wasn't good at all. I had never had a natural athletic ability. I had an honest conversation with myself, and I decided to focus on weightlifting and aim for the Olympics.

Speaker 1: Ok, Tell me about the weightlifting environment in your country. I mean, how big is it? What about coaching? Support? And competitions?

Speaker 2: Alright, well weightlifting as a sport there is still young, but slowly growing. There are only a few coaches that were previously competitive lifters. In terms of support, I have been campaigning for weightlifting ever since I became passionate about it. As a result, support is starting to increase. I am one of the few women in my country, if not the only individual, training to compete at the upcoming Olympics. I am hoping this will bring about a big change on the weightlifting scene.

Speaker 1: The female weightlifting team you are a part of is one of only a few around the world who participate in competitions countrywide. Tell us about that and about why you think sports are important for everyone?

Speaker 2: The perception of women's ability in sport has been changing over the years. People are becoming more open-minded about the topic. I think it is only a matter of time before all countries end up having full-scale female weightlifting teams as the sport grows, and more women start lifting. You know, it was only in 2000 that women were allowed to compete in weightlifting at the Olympics. Sports are important for everyone; children, adults, male or female from all around the world. Sport creates peace, sportsmanship, humbleness, respect, and truly unites nations.

Speaker 1: Right, any final words for your listeners?

Speaker 2: No matter what the challenges are, never give up or walk away from your dreams, make it a life-long mission to reach them. The more you persist, the closer you are going to get to your goals.

Track 55

Speaker: Emiratis are very proud of their young team. They played their first match in 1972 at a regional level, playing and winning against Qatar. The UAE team quickly qualified for its first Asian cup appearance in 1980 and drew against the Kuwaiti team. Since then, the team has taken part in the World Cup in Italy and several Asian Football Confederation (AFC) Cup matches.

The team's home stadium is Sheikh Zayed Stadium in the capital, Abu Dhabi. They have had different coaches and currently Mahdi Ali is managing and coaching the team. So far, he has managed to get them Olympic qualification.

Emiratis nickname the team 'Eyal Zayed', which in Arabic means Sons of Zayed. They are ranked 5th among Asian nations and are tied with Jordan. Their best result up to now has been at the AFC Cup in 1996 in the UAE, when they were runners up after a close match with the Saudi Arabian team. I think everyone in the UAE was very excited to watch the semi-finals in the AFC match against Australia, especially with the large number of Australian fans living in the UAE!

The team is consistently working; they are now preparing for the 2019 AFC Asian Cup hosted by the UAE. Just a few years from now, we'll get to see what the UAE has in store for us!

Track 56

Speaker 1: Hi, and welcome back to the programme. I'm your host Khalid Tuma and today we're talking about unusual sports and what incredible things they can do for your body. We sent our reporter Rashid Kuori out and about in Dubai to talk to some fitness fanatics.

Speaker 2: Hi there, Can I ask you what sport you're practising?

Speaker 3: Well, it's a bit unusual, but I love it. It's fencing.

Speaker 2: Really! That's the sport with a sword and a mask right?

Speaker 3: Yeah, but we call the sword a foil.

Speaker 2: Oh, right. So, why is fencing good for your health?

Speaker 3: Um ... well, you have to keep your body in good shape and be very fit for a start. To be good at fencing you need to have great reflexes, you know for the sudden movement, that kind of thing. So fencers are always careful about their diet because they can't be overweight.

Stamina is important too. The protective suit and mask we wear are very hot and quite heavy. This makes you tire quickly, so you have to be strong. It's very physically demanding and you need to have lots of endurance.

The other thing is that fencing is good for more than just your body. It trains you to be a calmer person, because the best fencers learn to watch their opponent carefully. This way you can see the best moment to attack. So in a way, it's a kind of brain training too.

Speaker 2: Wow that's really interesting, thanks.

Speaker 2: So Ali, I hear you do an unusual sport, yeah?

Speaker 4: That's right. Every day I do Nordic Walking.

Speaker 2: That's er ... walking with those poles isn't it?

Speaker 4: Yeah, the sport started in Finland which is usually very snowy, but you don't actually need snow - so you can do it anywhere, even here in the Emirates!

Speaker 2: Do you think it's a healthy sport?

Speaker 4: Definitely. The thing about Nordic Walking is that the movement uses 90% of the muscles in the body, so it's a brilliant sport for building up your upper body strength. But you know it also helps people who suffer from a bad back and it'll help keep your weight down.

Speaker 2: Wow! It sounds hard.

Speaker 4: Well, it is a great cardio workout and that's the reason why it is really beneficial for your heart. Since I've started doing Nordic Walking I've noticed that I feel much fitter. It doesn't matter if you are young or old, everyone should try it!

Speaker 2: Wow... Excuse me, sorry to interrupt you but isn't that Capoeira you're doing?

Speaker 5: Yes that right, it's a mix between Brazilian movement and martial arts.

Speaker 2: Ah... it looks beautiful. How did you start?

Speaker 5: Well some friends of mine really like Brazilian music and I went to a concert with them and there was a Capoeira display. I thought it looked really cool and that was it really. I've been doing it for about five years. What makes it so much fun is doing it with a bunch of other people.

Speaker 2: And do you think it's good for your health?

Speaker 5: Sure! First of all with Capoeira you can relax your body and your mind like yoga, so your stress levels go down. You know with Capoeira you'll be in a good mood in no time. Capoeira is also a fantastic way of improving your balance and co-ordination, but most of all it's intensive, so you build-up your leg muscles and stamina at the same time. I just love coming down to the beach early in the morning and practising some moves. Some of them can get quite complicated, but Capoeira is great fun!

Track 57

Speaker 1: Can you tell us when you started playing this sport and what got you interested in it?

Speaker 2: Well, I took the day off from work and I was going to the beach to relax when I saw big inflatable courts being set up, and I wasn't sure what they were. I was so curious that I started to talk to the people in charge of the project and they told me it was 'Bossaball'. I read about it on the Internet and got interested right away, especially since I'm a regular volleyball player. A few weeks after that, I started playing and have never stopped.

Speaker 1: After you tried it, what kept you interested in the game?

Speaker 2: Well, it's just so refreshing to be playing such an active game on the beach. The main thing I like about it is that it's not limited like volleyball where you can only use your hands. In Bossaball, you can also use your head and feet, making you move your whole body. It's also very flexible to set up, the standard size of the court is 50 yards long but it can also be played in a smaller or bigger space.

Speaker 1: Sounds like you really enjoy the game to know about all these details! Do you think people will play this sport for a long time in the UAE?

Speaker 2: Absolutely, people love to play beach sports here and this is perfect!

Speaker 1: So, are you a part of any international association for Bossaball?

Speaker 2: Yes, I always get updates on the latest tournaments around the world. The association is now considering a series of competitions to be held in the UAE, which I'm very excited about. It's really motivating to be part of a sport played globally and to feel like you automatically have friends all around the world.

UNIT 10

Track 58

Speaker: The Silk Road was an ancient network of trade routes that went from China to the Mediterranean Sea, connecting different people between East and West. The Silk Road began in the 2nd Century BCE and carried goods, ideas and even illness for thousands of miles between great civilisations for more than a thousand years.

Around 100 BCE, China's powerful Han Dynasty started trading with the West, sending large amounts of silk to other civilisations such as India, Arabia and Persia. This gave the road its name. It wasn't only silk, however, that was carried along the Silk Road. Chinese traders brought tea and spices too, while Romans brought gold and jewellery.

Goods were not transported by the same people all along the route. Many merchants travelled in groups, called caravans. Many caravans and individual merchants carried precious goods, so they travelled with bodyguards.

Different cultures were also exchanged along the Silk Road. Traders learned the languages spoken by people in the East, in the West and in the lands in between. This meant that different philosophies and technologies were also discovered.

Diseases were also carried along the Silk Road, infecting many along the way. The desert had little or no water. The mountains were not safe and the snakes were poisonous. On top of the natural dangers, there were also pirates.

One of the most famous travellers on the Silk Road was Marco Polo. His story takes him from Italy to China in the 13th Century and it describes the difficult life of people on the Silk Road.

Track 59

Speaker: China, one of the leading countries in the world in the steel industry, is facing a crisis. In 2013, China produced nearly 50% of the world's steel. The main competitors such as Ukraine and Russia never reached numbers close to China's. In 2014, China hit a record with exports of over 100 million tons. However, China is now having a major problem.

Domestic demand for steel has dropped 8.9% on the previous year and is expected to keep dropping to around 20%. This decrease in demand has never been seen before in China's history. The situation is affecting China's economy negatively. Medium and large steel mills lost around \$ 4.4 billion in the first few months of 2015 and steel prices hit an all-time low in July. This has created a large surplus of steel in the country, that's reached almost 300 million tons.

The problems within the Chinese steel industry are not related to a single cause, but instead are due to a number of different reasons. China's focus on new businesses, such as technology and banking, has certainly had a negative effect on the pride of old China, steel production.

Track 60

Speaker 1: Last year, our company had a turnover of over 2 million dollars.

Speaker 2: Mm ...

Speaker 1: And you know, we employ over 250 workers in our main factory.

Speaker 2: Oh ...

Speaker 1: Err ... Now we're looking at expanding into the Chinese market.

Speaker 2: Yeah ...

Track 61

Speaker 1: Really?

Speaker 2: Mmm ...

Speaker 1: No!

Speaker 2: Oh yeah ... ?

Speaker 1: Wow, I never knew that!

Speaker 2: That's very interesting.

Speaker 1: Well I never!

Speaker 2: Oh right!

Track 62

Speaker: Investing in real estate is one way of achieving a serious return on your capital. The UAE offers fantastic real estate opportunities to local and international investors alike. However, with increasing demand for real estate in the Gulf, finding the right property, be it houses, commercial premises or land for agriculture, can be quite difficult.

UNIT 11

Track 64

Speaker 1: What are you doing this weekend?

Speaker 2: Well, my daughter's graduating so my family and I are looking for a restaurant – somewhere to have a special meal. You go to restaurants a lot. Where do you recommend?

Speaker 1: OK ... right ... well, there are five restaurants I can think of. Would you prefer somewhere near the city centre, or something a bit further out?

Speaker 2: Well, we have a car so either is fine.

Speaker 1: Well, there are two central restaurants – there's Carlton and The Imperial, they're both near the main square. Then there's Red's – that's out in the country, about ten kilometres away. It's very peaceful, but also quite expensive so the tips are high too. Then there's Bob's Kitchen and Mr Pizza – they're both in town but not in the centre, they're out on the airport road.

Speaker 2: Mmm ... that might be a bit far out actually. What about the two in the city centre. Have you tried them?

Speaker 1: Well, they're both excellent restaurants. Carlton is quite unusual – it's in a very old building that was originally a large private house. They've only been serving for a few months, but the restaurant has already got an excellent reputation because of its mouth-watering dishes! So you have to book before going. Or there's The Imperial, which is a much more modern building. They've been offering special corporate lunches for a long time, but it's open to private guests as well. Their starters are so generous that you won't want to eat anything after that.

Speaker 2: Do any of these restaurants have a garden?

Speaker 1: Mr Pizza has a beautiful view, but all the tables are indoors. The only restaurant with a garden and tables outside is Bob's Kitchen. It's lovely in summer. Mr Pizza has been building an outdoor area for some time, but it's not finished yet. I go there often because their prices aren't too expensive, so the tips are low too.

Speaker 2: I see. Well, I think I'll probably go for one of the city centre restaurants. Thanks for your advice!

Track 65

Speaker 1: On today's programme, I have the pleasure of talking to Jack Bean, head chef at *Mangiare Restaurant* – one of the best places for Italian food in town.

Now Jack, I hear you've just written a book called *Rice around the World*. Have you decided to give up cooking and start writing for a living?

Speaker 2: No not at all. Food is my passion and I'll always work in the kitchen, but I love travelling, so I decided to combine the two.

You know, working in the Emirates has taught me how something as simple as rice can be used in an incredible

variety of ways. Dishes like *Mohammar* or *Tahta Maleh* are just bursting with flavour. But I realised that just about every country in the world has a different way of eating rice. So I thought that writing a book about it would be a good excuse to travel for a year.

Speaker 1: Yeah that's a brilliant idea. Tell us more!

Speaker 2: Well, I started in Japan, where people eat rice virtually every day. Sushi is probably the most beautifully-presented food you can imagine. It's rice that has been mixed with vinegar and then decorated with a piece of raw fish. When you talk about sushi, 99% of people think raw fish, but actually the word sushi refers to the rice. Sometimes seaweed is used to wrap the rice so your fingers don't get sticky.

Speaker 1: Ok, great, so where else did you go?

Speaker 2: Well another interesting place for rice is Thailand, where I discovered a tasty rice dish called *Kow Mun Gai*. Just about every corner in Thailand has a street vendor who cooks this right in front of you. The rice is cooked with chicken and served with yellow bean sauce and a kind of melon soup. It sounds a bit weird and it can be really spicy, but believe me it's totally delicious, probably my favourite dish of the whole trip.

Speaker 1: Yes ... I'm not keen on spicy foods to be honest.

Speaker 2: Another memorable moment was in Spain where almost every day I ate the traditional dish called Paella. It's a kind of rice stew with a mixture of ingredients such as prawns, chicken, meat and vegetables. The great thing about it is that you can put in whatever you like really, and there's a big difference in the taste of Paella from the north to the south of Spain. Some people say the word *Paella* derives from the Arabic word *Bagiyah*, meaning leftovers – you know, the food that you didn't eat that day, you cook it up with rice and make a Paella the next day. The one ingredient that hardly anybody leaves out is saffron, which gives the rice a lovely yellow colour. Paella really is delicious!

Speaker 1: Well that's all we have time for. So Jack, thanks for telling us about your mouth-watering world tour and good luck with the book!

Track 66

Speaker: Well, I'm sorry but I don't agree.; Well, I'm sorry but I don't agree.

Speaker: I've got a slightly different take on this.; I've got a slightly different take on this.

Speaker: Actually, I think that ...; Actually, I think that ...

Track 67

Speaker 1: So, Rashid, have you tried the new Italian restaurant that recently opened behind the mall?

Speaker 2: Yes I did actually, but I wasn't very impressed.

Speaker 1: Why's that? Was the food bad?

Speaker 2: The food was ok. I just didn't like the service. For instance, the waiter wasn't friendly at all when I was asking about the ingredients in one of the dishes.

Speaker 1: I know what you mean, bad service can really ruin your experience at a restaurant.

Speaker 2: Absolutely! But we went to this great Malaysian restaurant last weekend. You and your family should try it.

Speaker 1: Oh, we've never tried Malaysian. That sounds interesting. What kind of food do they serve?

Speaker 2: Well it's mainly rice, with different vegetables and sauces. A typical example is Nasi lemak, which is basically steamed rice served with peanuts, cucumbers and boiled eggs.

Speaker 1: It sounds like a very healthy kind of cuisine. Recently, we've been going to different Indian restaurants. One of my favourites is only a few minutes away from our house. So it's perfect!

Speaker 2: We love Indian, too! My children love eating the delicious Indian Na'an.

Speaker 1: Yes, same here. We love the variety they have. They've got vegetarian dishes as well as meat and chicken dishes, such as butter chicken, which is *absolutely delicious*.

Speaker 2: We had a bad experience a few weeks ago though. My wife ordered non-spicy food, specifically one of the lentil dishes, but when the food came everything was too spicy for her.

Speaker 1: Yeah, that's really annoying because it ruins your whole meal!

Speaker 1: So, how long has your business been running through DSC?

Speaker 2: Hmm, three and a half years and ...

Speaker 3: ... Actually, it'll be four years this April.

Speaker 1: And has it been smooth so far?

Speaker 3: Well, overall I think so, yes. It's just been so easy to set everything up and so smooth to maintain. By doing business through them, everything has been amazing. Are you thinking of setting something up through DSC?

Speaker 1: Yes, my production company has been running well in Qatar and we're thinking of expanding to the UAE. I've heard so much about DSC but thought that by asking someone already using them, I could get more information.

Speaker 3: DSC have helped a lot of film and media companies set up in the UAE. Many TV programmes, films and radio programmes are being produced through them. I've only heard good things from businesses using their ...

Speaker 1: ... Just a moment, what does DSC stand for? I keep forgetting. Is it Dubai Studio City?

Speaker 2: Yes, it is. So tell me, what kind of services are you looking for? What does your business need?

Speaker 1: Everything really! That's why I wanted to hear from you both what extra things DSC has to offer.

Speaker 2: Sure, well, by working through DSC you have access to the basic facilities, where you can rent office space and you get to use the sound stage and ...

Speaker 3: ... Sorry to interrupt, but I have to mention that the sound stage is of very high standards, you won't find anything similar anywhere else in the Middle East.

Speaker 1: That's good to hear.

Speaker 2: Does your company produce media for advertising firms? That's really popular in the UAE.

Speaker 1: We produce for different industries but yes, like other film-making companies, we do a lot of production for advertising agencies. Hmm, what about bringing in employees and specialists?

Speaker 3: They take care of all of that, they've got a strong visa services team, so ...

Speaker 2: ... Can I just say that they helped us bring in over 30 of our employees in less than three weeks. By bringing our staff in through them, we saved a lot of time.

Speaker 1: That sounds very encouraging. I'll contact them this week to arrange a meeting.

Speaker 1: Sunday sees the final evening of this year's Dubai International Film Festival at Madinat Jumeirah. The success of this incredible event depends on the hard work and energy of hundreds of young volunteers. We went behind the scenes to find out what it's like to be involved as a volunteer and what they thought of the films. Hi Amaya, you're volunteering for this year's festival. What does your role involve?

Speaker 2: Well, I'm an usher for the stars as they walk along the red carpet, stopping to have their photograph taken. I tell them either where to stand or where they

should go as they walk into the main hall. It's been a brilliant experience to get so close to some of the biggest names in cinema.

Speaker 1: And you get to see all the films at the festival for free, right? Which one has been your favourite?

Speaker 2: Yeah, that's a real bonus. I must say I've enjoyed all the films I've seen. I think my favourite is a film called *Green Light*. I mean the acting is just amazing – the star, Michael Washington, is totally convincing as the main character. The plot is really gripping – you never know what's going to happen from one minute to the next. Oh, and the ending ... Wow! Well, I won't tell you or it'll spoil it for you.

Speaker 1: Hi! I can see that you're volunteering. What's your role here at the film festival?

Speaker 3: Well, today I'm working in the back office – I have to invite all the journalists and media people to the press conference tomorrow – that kind of thing. But I've also been helping out at the box office, selling tickets and giving information to visitors at the festival. I enjoy both the administrative work and dealing with the public.

Speaker 1: And what's the best film you've seen so far?

Speaker 3: Ahhh! There was a beautiful Emirati film on last night called *Going to Heaven*. It's set here in the UAE. It's a wonderful story of two young boys who go on a journey from Abu Dhabi to Fujairah. I loved this film. It made me laugh, it made me cry and the cinematography – you know, the look and feel of the film – is just breathtaking. It really shows the beauty of our land. Highly recommended!

Speaker 1: Hi! Sorry, I can see that you're really busy. Are you volunteering too?

Speaker 4: Yes. I saw the website for the film festival and thought I would try it. Neither my brother nor my sister wanted to do it, but I want to work in marketing and event management in the future ... So, here I am volunteering at the festival and meeting some amazing people! Right now I'm checking all the final details for tonight's prize-giving ceremony. I want to be sure that everything is perfect!

Speaker 1: Have you had any time to see any of the films in the competition?

Speaker 4: Yeah, after work we can go to the film screenings for free. I've enjoyed seeing them all really, but the one that impressed me the most was a really lovely film from France. It's called *Birds of Passage* and it's a bittersweet story of friendship between two girls. The dialogue is great and the soundtrack is brilliant too – I've been listening to it on my headphones all day.

One way of making future learning goals is the SMART way!

S stands for Specific; M stands for Measurable; A stands for Achievable or Attainable; R stands for Relevant and T stands for Time-bound.

This is how it works:

First, make your learning goals **specific**.

Then, decide how to **measure** your goal. For example, *I can ask five questions using the first conditional to my teacher without any mistakes.*

The **achievement** of the learning goal must be something you are able to do. For a difficult learning goal, do it in small steps to make it easier.

Learning goals also need to be **relevant**, for example: *What do I know now?* Then ask: *What do I still need to know?* And finally: *What can I do to improve?*

Finally, you have to decide the **time** you need to achieve your goal. Then put the date in your diary!

This fear may be also based on the increased popularity of drones over the last couple of years.

In science, drones are being used in research to help prevent the spread of disease.

The use of drones can be controversial.

Drones are quite small and reasonably cheap. And, they are much more easily available and popular than before.

Where they have become particularly popular are in the fields of education and science.

Yes. It's true that, for many people, the increase in the number of drones used both by the public and by official bodies is quite worrying.

Once upon a time, there were no zebras. There were just horses. Lots and lots of horses. Every day, these horses worked really hard. They worked so hard that they didn't have any free time to relax or play.

The horses had to carry heavy loads. They carried them over long distances, up and down hills and across rivers. Every day, they worked hard and never complained. But no one ever said, 'Thank you'. They didn't ever say, 'We really appreciate all your hard work'. They didn't ever say, 'We don't know how we would manage without your help'.

One day, two of the horses decided that enough was enough! They were fed up of the way they were treated by their owners. They were fed up of having no time to rest and play in the lovely green fields around their stable. They were fed up of not being able to drink fresh water from the river. So they decided it was time to stand up for themselves. But what could they do?

F	It's 9 am. People are already leaving the race track after two hours of watching some of the fastest camels in the region and before the desert temperatures begin to soar.
E	Camel racing is a popular sport in the region and many people watch the events on their TVs. But not many people know that, over the past ten years, the camels that have been taking part in the races have actually been ridden by robots!
C	So how does this work? Instead of human jockeys controlling the animals – using whips and their voices – a dummy jockey is used, operated by a remote control. Activated by the trainer's voice – a voice that the camel recognises – this device 'drives' the camels. So, when we see cars driving along the side of the race track, we can be quite sure that they are the trainers who are following the race and 'talking' to their camels as they go. The camels respond to their owners' instructions, which are usually telling them to run faster!
A	But it's not all about giving instructions! The camel is fitted with another device controlled by a push-button. This button activates a whip. So by combining talking to the camel with controlling the whip, the owner is able to fine-tune what they want their camels to do.
B	In the past, human jockeys were used – often young children. These child-jockeys were light and enabled the camel to run faster. But the racing wasn't safe for the children, so a new law was introduced that banned anyone under 16 from racing. Another issue with human jockeys was the tendency to whip the camels hard to get them to run faster. This often resulted in injuring the camels and leaving them with scars. So what could they do ...?
H	... build robot jockeys! And through building these, they found that the camels responded very quickly to the push-button whip. This meant the animals were hit less and not so forcefully as by the human jockeys and the camels would finish the race free from injuries or scars.
G	Robot jockeys have a further advantage over their human counterparts: they are much lighter, and this usually means that the camels run much faster.
D	So, how are these robots made? Apparently, the robots themselves can be made from almost anything. And some of them have shock absorbers and GPS trackers! But the most important factor is that they are really light!

E	Camel racing is very popular in the region. But today, many camels are ridden by robots!
C	The dummy or robot jockey is operated by a remote control. The camel owner follows the race in his car and operates the remote control. The camel responds to the owner's instructions.
A	The camel also has a button that controls the whip. The owner pushes the button to make the camel go faster.
B	In the past, children rode the camels. They were light and the camels were able to run very fast. But they were too young and riding camels was too dangerous. The camels were also hurt by how hard the whips hit the animal.
H	So robot jockeys were invented. The dummy jockeys use the push-button whip. This means the camels aren't hit so often by the whip so they have fewer injuries.
G	Robot jockeys are lighter than human jockeys. This means they can run much faster.
D	The dummy jockeys are made from many different materials and some of them have GPS trackers! But the most important factor is that they are very light in weight.

Alia: Well, I've been sewing since I was about seven years old, so I've been researching Emirati embroidery this term. What about you, Hessa, which topic have you been doing for your project this term?

Hessa: I've been looking at lessons one and two. My father has been building dhows since his first job, so I've been researching boat building with him at his work. How long have you been writing up your project?

A The nervous system transports messages from our brain via the spinal cord all over our body. The messages are transported in nerve cells or neurons. These neurons are made up of bundles of nerve fibres, which are like thin wire. Some neurons are very long as they need to send messages from the brain to our feet.

B Our brains are like huge computers that have evolved over thousands of years. They are used for storing information that we can recall (memory) and they are used to control how we think and how we respond to different situations.

C Neurons respond to stimulation such as touch, sounds or images. This stimulation triggers a small electrical pulse that starts a process of sending a message from one neuron to another.

D The main function of the brain is to control thoughts and movements, to make any decisions and to store information as memories. It is the control centre of the nervous system.

A: 'If that's hydroponics,' asks Eman, 'then what is aquaponics? How does it work?'

B: 'Aquaponics combines aquaculture – which is fish farming – with hydroponics,' explains Midiya.

C: 'First of all, fish are kept in tanks and fed fish food,' he says. 'The fish produce waste which could be toxic to them, so this is pumped out into other tanks where plants are being grown hydroponically. The plants take up the nutrient-rich waste water through their roots and cleanse it naturally so that finally it can be pumped back to the fish tank and the cycle starts all over again. It's quite simple!' he adds.

D: Today most farms using aquaponics are in areas of the world that have little natural access to fish and vegetables. As a result, these areas are no longer as dependent on importing produce as before. The food is fresher and, in addition, there are fewer food miles between farm and table.

We live in a world that is becoming more interconnected. Many of us chat to someone in another country or receive messages or news items from around the globe. The Internet has made it much easier to access information about the world and how people live in different countries.

The world is also more accessible physically. Travelling from one part of the world to another is not only much easier today than it was 40 years ago, but it is much faster. In the future, it is possible that travelling to the remotest parts of the world will have become even faster than today.

In a world where people can go to very different countries to the ones they grew up in – for work, to visit or to live in – we need to learn to respect each other so we can live peacefully together. The United Nations is an organisation that works towards making this a reality. By building bridges between countries and cultures it hopes that it will have created a world that is safe to live in and where all people are respected.

The United Nations also works towards bringing peace to areas of conflict and to safeguarding people's rights everywhere in the world. Central to the work of the United Nations is a charter that is made up of rules that countries can agree to follow. These rules state how we all work together – from individuals to countries – to keep world peace.

Hi. I'm Badria. I come from the UAE and I live in Dubai. I am studying international relations at university. I am going to tell you about multiculturalism in the Emirates.

First, most of the people who live in Dubai are expatriates! Expatriates make up 85% of the population. We often see people from different countries in the shopping centres, museums, outdoors and at work.

We can learn so much from each other, about what is important for each of us, how we all view the world. I think we can understand each other better as a result but it isn't always easy.

There are some difficulties for expatriates living here. The biggest barrier is the language. Arabic isn't very easy to learn. But that's the same for anyone living in a country that speaks a different language.

I also think that some Emirati are worried that their culture is going to disappear because of the number of expatriates living here. But we need people to come here to work in many different professions. And many Emiratis work and live as expatriates in other countries!

PCM 26 Industries in the UAE

Industry A

When you think of agriculture in The Gulf region, you usually have an image of date farming. But between Abu Dhabi and Dubai, there is an agricultural revolution going on. Hydroponics uses science to boost traditional methods and reduce the impact on the environment.

The technique, which started in Europe, grows fruit and vegetables without using soil. Normally, plants use considerable energy to push roots out to find the nutrients in the earth. Instead, with hydroponics, nutrients are fed to the roots with specially blended water which is repeatedly recycled. A team of scientists makes sure that the nutrients in the water are constantly monitored to maximise output and ensure food safety. Not only do the fruits and vegetables look and taste as good as traditional ones, they can be grown all year round whatever the season.

Hydroponics is an eco-friendly way of growing food because of massive saving in water consumption; to produce one kilo of strawberries traditionally requires 370 gallons of water, but with hydroponics the same results can be achieved with just 15 gallons! As this industry is still in its infant stages, investment opportunities are plentiful.

Verdict: A growing industry. Huge potential.

Industry B

Did you know that there's a corner of the UAE called 'Little Holland'? Al Hayder, between Dubai and Al Ain, doesn't have windmills or canals but it has become an important centre for the production of roses. Estimates put the industry at around \$90 million a year, mostly in exports to markets such as Europe and Australia.

Growing roses is a real craft and producers at Al Hayder rely on centuries-old techniques. The ancient cycle of planting, pruning (cutting the flowers back) and removing leaves regularly is still practised. Essential to the process is a thick layer — around 30 centimetres — of manure. Al Hayder offers perfect conditions; the dry atmosphere, many hours of direct sunlight and good greenhouse infrastructure all combine to allow for an unusually long growing season.

Rose extracts are used in products to help with weight loss and improve skincare and there is high demand for the flowers in Europe and increasingly in The Gulf itself. As the industry is set to grow, profits could be high. Next time you see a bunch of beautiful roses, don't think Holland, think Al Hayder!

Verdict: A traditional industry in a changing world. Only for long-term investors.

Industry C

When designing the Streamlight Tower in London, the architects knew there was only one place that could produce high-quality tiles for the kitchens, bathrooms and floors: the Emirates. The UAE has become the most important global producer in ceramic tiles, with production centered in Ras Al Khaimah.

One company leading the market is RAK Ceramics: with an annual profit of over a billion US dollars, they produce tiles for most of the landmark buildings across The Gulf Region such as Burj Al Arab, Jumeriah Beach Residence and the Parliament of Oman.

Companies like RAK Ceramics pride themselves on satisfying their most demanding clients. A quality tile has to withstand foot traffic and tough climatic conditions. What's more, it also has to look and feel as the customer wants. The ceramic producers in the Emirates are equipped with some of the biggest kilns in the world and when you think that over 90% of the sector's production is consumed in the Emirates alone, the opportunities for expansion in emerging markets such as China, South America and Europe are huge.

Verdict: Great returns in good times but industry has periodic recessions.

Industry D

With the aviation industry set to contribute over \$53 billion to the Emirati economy by 2020, the time is right for investors looking to get in on the action. Aviation is a booming industry symbolising the rapid development of the country. The UAE now boasts two world-class airline carriers and seven international airports. Once the next extension phase of the Al Maktoum Airport in Dubai City is complete, it will become the world's largest airport capable of catering for 160–260 million passengers a year.

The expansion in aviation has gone hand-in-hand with the country's desire to make the UAE a world hub for international travel, tourism and business. There are over 200 international routes currently operating from the UAE. It's hard to believe that an airline like Emirates started flights in 1985 with just 2 aircraft. Figures suggest that the airline industry now employs 250,000 workers directly and many more in support services.

Investors in the airline industry often worry about potential risks such as accidents, but statistics show that on this point airlines in The Gulf region are second to none. Although investment opportunities in this sector do not come cheap, the returns are virtually guaranteed.

Verdict: Only for those with huge capital to invest.
