when carrying out research you must create questions that will solve the brief. Look at the brief analysis and then answer the research questions that have been provided for this project.

Activity 1.1.4

Design research

Answer the questions below to help you carry out design research:

1) Will the colour of your design affect the finished product? How?

If it is more colorful it will be more better

2) What mechanisms must the design include?

To move the joints of the robotic arm, 5 servo motors are used.

3) What type of joints are suitable for a robotic arm?

Wrist, elbow, and shoulder

alManahj.com/ae

4) What materials are suitable for 3D printing?

PLA and ABS, Aluminum can now be 3D printed with advancing printing methods.

5) What is the maximum 3D printing area of the 3D printer in your classroom?

140 mm x 140 mm

6) What are the dimensions of the servo motors supplied for this project? How will this affect the design?

23 x 12 x 29 mm. This will affect the design dimensions of the joint and base as you need to ensure the correct size to house the servo motors.

Activity 1.1.5

Robotic arm control circuit research

Answer the questions below to help you carry out research on the robotic arm circuit:

1) The robotic arm control circuit contains three main components, the Arduino board, servo motors, and potentiometers. Briefly explain the function of each component.

- Arduino is a single-board microcontroller.

- the servo motor is a rotary actuator.

- Potentiometers are analogue rotation sensors.

2) What degree of movement is possible by the given servo motor?

It can only move back and forth about 180 degrees.

3) What are the minimum and maximum values of a potentiometer?

The voltage coming from the potentiometer is expressed on a scale of 0-1023.

4) What Arduino function was used to control the motor's direction of rotation? Explain the function's parameters.

The map function is used to map a value within a range to one within another range.

5) How can you reverse the motor's direction of rotation?

one possible way

$\text{map}(\text{value}, 0, 1023, 0, 180)$ → the motor rotates in one direction

$\text{map}(\text{value}, 0, 1023, 180, 0)$ → the motor rotates in the opposite direction

4) How many degrees-of-freedom are there in your design of the robotic arm? Justify your answer.

angular movement of the base.

shoulder in/out movement.

elbow up/down movement.

Why is biomimicry important?

- Sustainability: biomimicry follows life's principles of using free energy and life-friendly materials and processes
- Creating design solutions that perform well.
- Cut material costs: by studying the structures of nature's strategies and how they are built.
